 georgios n yannopoulos appropriately relates the developing field of knowledge based systems in
 law with the basis in classic philosophy explicating relations which too often are not properly
 understood the decision model developed by the author is important as it integrates and explains
 arguments which often have been seen as incompatible the use of the theoretical foundation in
 describing and in giving a critical analysis of the construction of real knowledge bases systems
 becomes therefore very valuable jon bing norwegian research center for computers and law expert
 systems in law have not been as easily achieved as was originally envisaged because too many
 thought the task to be trivial and ignored the complex issues involved yannopoulos work is

valuable because he attempts to detail these issues and overcome them philip leith queen s university of belfast yannopoulos book addresses some of the most crucial problems in the field of information technology and law the development of more advanced it solutions for the legal sector will always be closely related to our ability to model and understand the legal reasoning process in his analysis yannopoulos elegantly integrates knowledge from many different areas and in this respect the book reflects an all too seldom seen broadness pete wahlgren the swedish law and informatics research institute iri there has been an abundance of recent research on developing intelligent support systems dr yannopoulos work is especially significant because it examines the necessary legal background for building such systems it will be an essential reference for the prospective builders of intelligent legal support systems john zeleznikow la trobe university bundoorra australia
