researchers in areas such as artificial intelligence formal and computational linguistics biomedical informatics conceptual modeling knowledge engineering and information retrieval have come to realise that a solid foundation for their research calls for serious work in ontology understood as a general theory of the types of entities and relations that make up their respective domains of inquiry in all these areas attention is now being focused on the content of information rather than on just the formats and languages used to represent information the clearest example of this development is provided by the many initiatives growing up around the project of the semantic and as the need for integrating research in these different fields arises so does the realisation that strong principles for building well founded ontologies might provide significant advantages over ad hoc case based solutions the tools of formal ontology address precisely these needs but a real effort is required in order to apply such philosophical tools to the domain of information systems reciprocally research in the information sciences raises specific ontological questions which call for further philosophical investigations the purpose of this is to provide a forum for genuine interdisciplinary exchange in the spirit of a unified effort towards solving the problems of ontology with an eye to both theoretical issues and concrete applications this book contains a wide range of areas all of which are important to the development of formal ontologies

this book provides a historical inquiry into the quantification of needs in humanitarian assistance needs are increasingly seen as the lowest common denominator of humanity standard definitions of basic needs however set a minimalist version of humanity both in the sense that they are narrow in what they compare and that they set a low bar for satisfaction the book argues that we cannot understand humanitarian governance if we do not understand how humanitarian agencies made human suffering commensurable across borders in the first place the book identifies four basic elements of needs as a concept as a system of classification and triage as a material

apparatus and as a set of standards drawing on a range of archival sources including the united nations refugee agency unhcr médecins sans frontières msf and the sphere project the book traces the concept of needs from its emergence in the 1960s right through to the present day and united nations secretary general ban ki moon s call for evidence based humanitarianism finally the book assesses how the international governmentality of needs has played out in a recent humanitarian crisis drawing on field research on central african refugees in the cameroonian borderland in 2014 2016 this important historical inquiry into the universal nature of human suffering will be an important read for humanitarian researchers and practitioners as well as readers with an interest in international history and development

the varied cultural functions of dress textiles and clothwork are used in this collection of essays to examine long standing assumptions about the middle ages at one end of the spectrum questions of dress call up feminist theoretical investigations into the body and subjectivity while broadening those inquiries to include theories of masculinity and queer identity as well at the other extreme the production and distribution of textiles carries us into the domain of economic history and the study of material commodities trade and cultural patterns of exchange within western europe and between east and west contributors to this volume represent a broad array of disciplines currently involved in rethinking medieval culture in terms of the material world

the presidency of george w bush has been a curious one born in contention challenged by the most dramatic foreign directed attack on american soil and transformed by a combination of crisis and conflict that has generated considerable support domestically and yet while much attention has been focused on the bush administration s external policies how it has pursued its goals and had its effects on the domestic scene has been as important examining the push and pull of the bush

presidency by looking especially at domestic dynamics the authors look at the tendency towards centralizing power and its implications for american politics from the midterm elections of 2002 where the republicans scored historic victories to relations with the press and from executive branch relations with congress to increased federal involvement in education the authors examine and shed light on crucial issues this book examines how words and deeds in a time of crisis will define the bush presidency place in american politics and history

what is operations management every business is managed through three major functions finance marketing and operations management illustrates this by showing that the vice presidents of each of these functions report directly to the president or ceo of the company other business functions such as accounting purchasing human resources and engineering support these three major functions finance is the function responsible for managing cash flow current assets and capital investments marketing is responsible for sales generating customer demand and understanding customer wants and needs most of us have some idea of what finance and marketing are about but what does operations management do operations management om is the business function that plans organizes coordinates and controls the resources needed to produce a company's goods and services operations management is a management function it involves managing people equipment technology information and many other resources operations management is the central core function of every company this is true whether the company is large or small provides a physical good or a service is for profit or not for profit every company has an operations management function actually all the other organizational functions are there primarily to support the operations function without operations there would be no goods or services to sell consider a retailer such as the gap which sells casual apparel the marketing function provides promotions for the merchandise and the finance function provides the needed capital it is the operations function however that plans and coordinates all the resources needed to design produce and deliver the merchandise to the various retail locations without operations there would be no goods or services to sell to customers

almost sixty years ago the mennonite missionary team working in the argentine chaco decided to look for ways to be effective in their ministry while being faithful to jesus lifestyle and teaching they left behind paternalistic models and conquering methods and were liberated from the mindset of forming a denominational church as a result they found an alternative missionary style of walking alongside those they worked with giving priority to the integrity of the local people mission without conquest is a historical narrative of how the toba qom people of the argentine chaco

followed Jesus' way from the time of their conversion until the formation of an autochthonous church. This book embodies a new way to approach the church's missionary task, a way that makes the mission of Jesus Christ the paradigm for Christian mission until His return.

The diversity of interconnected cultures on a bounded planet requires more shared orientations. The humanities and politics have to face fundamental questions: What does a humanism look like that does not move too rapidly to universalize the views and historical experiences of the European or American world? How can we conceive of globality as a new entity without playing unity and diversity off against one another? Does a world culture that is becoming ever more closely related in fact need common values or only rules of human exchange? How can we succeed at civilizing an ever-present ethnocentrism? How do we keep the terms culture and humanity from being misused as weapons in identity wars? Any realistic cosmopolitanism must proceed from an understanding of humankind as one entity without requiring us to re-design cultures to fit on with some sort of global template. Answers can be gained by deploying shared characteristics of humans as well as pan-cultural commonalities. This book offers an anthropologically informed foundation for addressing pertinent questions of intercultural exchange.

rapid advances are taking place in the field of imaging this results in the need for re-evaluating and redefining the role of a modality in different clinical scenarios coupled to this particularly in paediatric radiology is the need for ensuring patient safety the

industry has made significant attempts to minimize radiation exposures in imaging and this is pre requisite that cannot be over emphasized in children paediatric radiology is already a well established subspecialty in the west but in the developing world due to the paucity of trained radiologists in proportion to our population every practicing radiologist needs to be aware of the special needs and disease entities in children the third edition of the book has been designed to include current recommendations guidelines and existing knowledge on the subject the content of all chapters has been updated while some have been significantly restructured new chapters have also been added it is our earnest hope that our readers will find this text informative and that it will aid in their learning process and daily practice
