leading to antiferromagnetism and ferromagnetism which imply different magnetic interactions of magnetic moments with antiparallel and parallel configurations this compound exhibits humidity induced variation of the number of water molecules of crystallisation leading to a reversible structural phase transition and the alternation of the long range ferromagnetic ordering temperature from T_c 29 K for the pristine assembly 1 to T_c 49 K for the sample stored in a low humidity atmosphere 1. This widely multi disciplinary issue covers recent progress in the engineering of molecular magnets from isolated molecules to nanoparticles and tunable supramolecular networks switchable magnetic molecules spin crossover electron transfer etc and multi functional materials purely molecular or hybrid systems about this book combining the contemporary knowledge from widely scattered sources this is a much needed and comprehensive overview of the field in maintaining a balance between theory and experiment the book guides both advanced students and specialists to this research area
