the scope of this volume is primarily to analyze from different methodological perspectives similar valuation and optimization problems arising in

financial applications aimed at facilitating a theoretical and computational integration between methods largely regarded as alternatives increasingly in recent years financial management problems such as strategic asset allocation asset liability management as well as asset pricing problems have been presented in the literature adopting formulation and solution approaches rooted in stochastic programming robust optimization stochastic dynamic programming including approximate sdp methods as well as policy rule optimization heuristic approaches and others the aim of the volume is to facilitate the comprehension of the modeling and methodological potentials of those methods thus their common assumptions and peculiarities relying on similar financial problems the volume will address different valuation problems common in finance related to asset pricing optimal portfolio management risk measurement risk control and asset liability management the volume features chapters of theoretical and practical relevance clarifying recent advances in the associated applied field from different standpoints relying on similar valuation problems and as mentioned facilitating a mutual and beneficial methodological and theoretical knowledge transfer the distinctive aspects of the volume can be summarized as follows strong benchmarking philosophy with contributors explicitly asked to underline current limits and desirable developments in their areas theoretical contributions aimed at advancing the state of the art in the given domain with a clear potential for applications the inclusion of an algorithmic

computational discussion of issues arising on similar valuation problems across different methods variety of applications rarely is it possible within a single volume to consider and analyze different and possibly competing alternative optimization techniques applied to well identified financial valuation problems clear definition of the current state of the art in each methodological and applied area to facilitate future research directions
