Autonomy and Control of State Agencies 2010-01-29 by comparing the autonomy control and internal management of public organizations this book show how new public management doctrines work out in three small european states with different politico administrative regimes using survey data on 226 state agencies hypotheses drawing on organization theory and neo institutional schools are tested

State Capacity, Economic Control, and Authoritarian Elections 2018-03-09 although the phenomenon of authoritarian elections has been a focal point for the literature on authoritarian institutions for more than a decade our understanding of the effect of authoritarian elections is still limited combining evidence from cross national studies with studies on selected cases relying on recent field work this book suggests a solution to the paradox of authoritarian elections rather than focusing on authoritarian elections as a uniform phenomenon it focuses on the differing conditions under which authoritarian elections occur it demonstrates that the capacities available to authoritarian rulers shape the effect of elections and high levels of state capacity and control over the economy increase the probability that authoritarian multi party elections will stabilize the regime where these capacities are limited the regime is more likely to succumb in the face of elections the findings imply that although multi party competition and state strength may be important prerequisites for democracy they can under some circumstances obstruct democratization by preventing the demise of dictatorships this text will be of key interest to scholars students and practitioners of democratization and to those who study autocracy and electoral authoritarianism as well as comparative politics more broadly

European State Aid Law and Policy (and UK Subsidy Control) 2022-12-15 the fourth edition of conor quigley s highly acclaimed book provides lawyers regulators and public officials with a definitive statement of the law and practice of state aid the book places state aid law and policy in its economic commercial and industrial context exploring the concept of state aid and its function as a tool of eu law all of this is achieved by a thorough examination of the jurisprudence of the european courts and the decisions legislation and guidelines of the commission in declaring aid compatible or incompatible with the internal market the fourth edition includes new chapters on covid 19 and ukraine emergency measures brexit eu foreign subsidy regulation uk subsidies control and updated guidelines and block exemption regulations on regional aid r d i environmental protection and climate change

Westmoreland State Park Beach Erosion Control 1974 this study gives an overview of the obligations of flag states and the control of their compliance with such obligations it outlines the main obligations as to maritime safety and security as well as marine pollution prevention under international as well as european law and shows the still existing enforcement deficits vis a vis non complying flag states as well as substandard ships some of the main developments to counter these deficits such as the voluntary member state audit scheme on the imo level or the third maritime safety package on the eu level are taken into account

A Survey of State Assessment Procedures for Silvicultural Nonpoint Source Control Programs 1979 while optimality

conditions for optimal control problems with state constraints have been extensively investigated in the literature the results pertaining to numerical methods are relatively scarce this book fills the gap by providing a family of new methods among others a novel convergence analysis of optimal control algorithms is introduced the analysis refers to the topology of relaxed controls only to a limited degree and makes little use of lagrange multipliers corresponding to state constraints this approach enables the author to provide global convergence analysis of first order and superlinearly convergent second order methods further the implementation aspects of the methods developed in the book are presented and discussed the results concerning ordinary differential equations are then extended to control problems described by differential algebraic equations in a comprehensive way for the first time in the literature

A Guide for State Planning Agency Grants Under the Omnibus Crime Control and Safe Streets Act of 1968 1968 this text explains how to analyze and design discrete time digital systems and shows how linear algebra and state space theory are used to design digital control systems it features a complete chapter on the design of full and reduced order observers there is also a review chapter on linear algebra and matrix theory
