**War at Sea** 1997 between 1942 and 1944 a very small very secret very successful clandestine unit of the royal navy operated between dartmouth in devon and the brittany coast in france it was a crossing of about 100 miles every yard of it dangerous the unit was called the 15th motor gunboat flotilla crewed by 125 officers and men it became the most highly decorated royal naval unit of the second world war the 15th mgbf was an extraordinary group of men thrown together in the most secret of adventures very few were regular

royal naval officers instead the unit was made up of mostly royal naval volunteer officers and duration only sailors their home was a converted paddle steamer and luxury yacht but their work could not have been more serious their mission was to ferry agents of SIS and SOE to pinpoint landing sites on the Brittany coast in occupied France once they had landed their agents together with stores for the resistance they picked up evaders escaped POWs who had had the good fortune to be collected by escape lines run by M19 as well as returning SIS and SOE agents it is a story that is inextricably entwined with that of the many agents they were responsible for Pierre Hentic Yves Le Tac Virginia Hall Albert Hue Jeannie Rousseau Suzanne Wareham Fran Ois Mitterrand and Mathilde Carre as well as many others without the flotilla such intelligence gathering networks as Jade Fitzroy and Alliance would never have developed and SOE's Var Line and M19's Shelburne escape line would never have been realised drawing on a huge amount of research on both sides of the channel including private archives of many of the families involved a dangerous enterprise brings the story of this most clandestine of operations brilliantly to life

**The War at Sea, 1939-1945** 1960 in Britain memory of the first world war remains dominated by the trench warfare of the western front yet in 1914 when the country declared war the overwhelming expectation was that Britain's efforts would be primarily focussed on the sea as such this volume is a welcome corrective to what is arguably an historical neglect of the naval aspect of the great war as well as reassessing Britain's war at sea between 1914 and 1918 underlining the oft neglected contribution of the blockade of the central powers to the ending of the war the book also offers a case study in ideas about military planning for the next war questions about how next wars are thought about planned for and conceptualised and then how reality actually influences that thinking have long been and remain key concerns for governments and military strategists the essays in this volume show what realities there are to think about and how significant or not the change from pre war to war was this is important not only for historians trying to understand events in the past but also has lessons for contemporary strategic thinkers who are responsible for planning and preparing for possible future conflict Britain's pre war naval planning provides a perfect example of just how complex and uncertain that process is building upon and advancing recent scholarship concerning the role of the navy in the first world war this collection brings to full light the dominance of the maritime environment for Britain in that war and the lessons that has for historians and military planners

**The War at Sea** 1956 Roskill describes sea battles convoy actions and the contribution made by technology in the shape of ASDIC and radar volume I the defensive

World War II at Sea 2018-04-02 a journey into the golden age of naval history when these floating powerhouses ruled the waves the battleship was the ultimate embodiment of naval power during the latter stages of the British empire with the Royal Navy the first to build the dreadnought battleship in 1906 the new design with a uniform main battery and steam turbines making it faster and more accurate than ever before sparked a race with the German Navy that culminated in the battle of Jutland in 1916 the only fleet to fleet naval battle during the first world war with major losses on both sides and several treaties during the interwar years banning the construction of new battleships a new generation emerged only in the second world war with Japan secretly creating Yamato and Musashi two of the most powerful battleships ever built world war II saw the zenith of the battleship with many pivotal battles such as that of Denmark Strait during which the iconic battleship HMS Hood was sunk the second battle of Guadalcanal and the battle of Leyte Gulf to name but a few the Germans the Japanese the Royal Navy and the US Navy were locked in a titanic struggle across vast distances in which battleships for a time played a decisive role until the development of new aircraft carriers and the growing use of torpedoes

began to make them obsolete since the 1990s no battleship has seen active service this accessible short history gives an expert overview of the history of the battleship looking at its origins the role played by battleships in both world wars famous ships and their stories and the weaponry and technology they employed

War at Sea Under Queen Anne, 1702-1708 1938 winner of the John Lyman Book Award for Naval and Maritime Science and Technology a compelling and convincing historical analysis of World War I Navy News while the overriding image of the First World War is of the bloody stalemate on the Western Front the overall shape of the war arose out of its maritime character it was essentially a struggle about access to worldwide resources most clearly seen in Germany's desperate attempts to counter the American industrial threat which ultimately drew the United States into the war this radical new book concentrates on the way in which each side tried to use or deny the sea to the other and in so doing describes rapid wartime changes not only in ship and weapons technology but also in the way naval warfare was envisaged and fought melding strategic technical and tactical aspects Friedman approaches the First World War from a fresh perspective and demonstrates how its perceived lessons dominated the way navies prepared for the Second World War Friedman is a master of the evolution of naval strategy tactics and technology a rewarding read that will leave many wanting to return again and again just to see what they might have missed the first time Australian Naval Institute Dr Friedman's research credentials are impeccable and the huge amount of factual detail he has unearthed will be sure to delight many there is nothing comparable in either depth or scope out there and for this reason if no other this book is likely to become a standard work on the naval aspects of the Great War Naval War College Review
