Dec 05 2023

based on this analysis we designed and synthesized a class of polyguanidine peptoid derivatives remarkably the subset of peptoid analogues containing a six methylene spacer between the guanidine head group and backbone n hxg exhibited significantly enhanced cellular uptake compared to tat 49 57 and even to r9

influence of the synthesis and crystallization processes on

Nov 04 2023

the incorporation of multiple metal atoms in multivariate metal organic frameworks is typically carried out through a one pot synthesis procedure that involves the simultaneous reaction of the selected elements with the organic linkers

biochemistry collagen synthesis statpearls ncbi bookshelf

Oct 03 2023

collagen is protein molecules made up of amino acids it provides structural support to the extracellular space of connective tissues due to its rigidity and resistance to stretching it is the perfect matrix for skin tendons bones and ligaments collagen can be further divided into several groups depending on the type of structures they form
