this book talks about how to exploit business and service design techniques for business advantage in the financial sector it does so not through the theory but rather through how to deal with the enduring business issues and by addressing practical problems the business issues that banks are using this new technology to address are long lasting hence the need to look at how banks exploit the opportunities created by this new technology and how the banks will function differently these business issues are faced by both established banks and the relatively new fintech sector fintechs have the advantage of being end to end designed from the outset but do not have the brand or depth of data available to established players in recent times themes such as digitalization and the agile approach have become key for business success because every company is now a software company in addition every bank is now a data management company as well given the contribution that data makes to the value adding to financial services central to dealing with all this change is the role of the designer in both business and service the design of the business is the means to making success happen and the designer role is therefore key to linking strategic intent to practical change the designer role will be important in the future as well as the design methods to be used and the business issues to be addressed in the industry this book should be used as a guide both for design methods and as a prompt to design out business problems

## **Agents and Artificial Intelligence 2021-06-14**

this book assesses the normative and practical challenges for artificial intelligence ai regulation offers comprehensive information on the laws that currently shape or restrict the design or use of ai and develops policy recommendations for those areas in which regulation is most urgently needed by gathering contributions from scholars who are experts in their respective fields of legal research it demonstrates that ai regulation is not a specialized sub discipline but affects the entire legal system and thus concerns all lawyers machine learning based technology which lies at the heart of what is commonly referred to as ai is increasingly being employed to make policy and business decisions with broad social impacts and therefore runs the risk of causing wide scale damage at the same time ai technology is becoming more and more complex and difficult to understand making it harder to determine whether or not it is being used in accordance with the law in light of this situation even tech enthusiasts are calling for stricter regulation of ai legislators too are stepping in and have begun to pass ai laws including the prohibition of automated decision making systems in article 22 of the general data protection regulation the new york city ai transparency bill and the 2017 amendments to the german cartel act and german administrative procedure act while the belief that something needs to be done is widely shared there is far less clarity about what exactly can or should be done or what effective regulation might look like the book is divided into two major parts the first of which focuses on features common to most ai systems and explores how they relate to the legal framework for data driven technologies which already exists in the form of national and supra national constitutional law eu data protection and competition law and anti discrimination law in the second part the book examines in detail a number of relevant sectors in which ai is increasingly shaping decision making processes ranging from the notorious social media and the legal financial and healthcare industries to fields like law enforcement and tax law in which we can observe how regulation by ai is becoming a reality
