undergraduate course on reinforced concrete design reinforced concrete also called ferroconcrete is a composite material in which concrete's relatively low tensile strength and ductility are compensated for by the inclusion of reinforcement having higher tensile strength or ductility reinforced concrete concrete in which steel is embedded in such a manner that the two materials act together in resisting forces the reinforcing steel rods bars or mesh absorbs the tensile shear and sometimes the compressive stresses in a concrete structure engineered concrete flooring is a flooring technology that changes the state of horizontal concrete surfaces to one that is similar in appearance to another materials while exhibiting similar or improved performance characteristics
