ORIGINS OF MAN PHYSICAL ANTHROPOLOGY 1960

the effort of anthropometric historians to unearth the broad patterns of human biological well being has led to the examination of nearly forgotten centuries old records from dusty archives in practically all the continents of the globe french historians in the annales tradition were among the first to adopt methods from physical anthropology and from the biological sciences but the real expansion of the field dates from the pathbreaking work of richard steckel and robert fogel which launched the discipline of anthropometric history on american soil research has confirmed that physical stature is related to nutritional status and therefore to real family income and thus to the general standard of living historians and development economists will find this line of research useful as it informs us about the standard of living of members of society for whom data on wages are seldom available women children aristocrats farmers and slaves in addition this research has shown that the biological standard of living may diverge from conventional indicators of welfare during the early stages of industrialization thus per capita income is an ambiguous measure of welfare during some phases of growth and it must be supplemented with data from other indicators such as physical stature the essays in this volume broaden our knowledge of the human effects of the momentous economic changes of the last two centuries extending analysis to regions for which such information has been lacking including russia canada indonesia italy and spain

The Biological Standard Of Living On Three Continents 2018

what is new in the twelfth edition physical anthropology is a dynamic field we have updated the entire book on the basis of new information this is seen most clearly in the chapters on human genetics chapters 2 and 3 in the last several years our

knowledge of human genetics has increased enormously we reorganized rewrote and streamlined chapters 2 and 3 to reflect the new information in genetics that was relevant to physical anthropology other areas of significant revision were the chapters on the fossil record of human evolution chapters 12 to 15 again we included new information that has been published in recent years but not all of that information the fact that new information and ideas are published does not necessarily mean that the significants of those finding and concepts are immediately known so we did not include every new finding and idea in this edition an example of why we choose not to include everything might be made clear with something that happened just as the 10th edition of this book was being prepared a 47 million year old fossil darwinius massillae which was nicknamed ida was touted as the missing link in human evolution the internet and print media were full of claims and speculation much of which either was not true or played on the public s misunderstanding of evolution especially the misconception of a missing link ida has little significance to the understanding of human evolution we hope that after students complete a course in physical anthropology they will recognize illogical or factually incorrect statements made in the name of evolutionary theory in the popular media
