build create and deploy your own computer vision applications with the power of opency about this book this book provides hands on examples that cover the major features that are part of any important computer vision application it explores important algorithms that allow you to recognize faces identify objects extract features from images help your system make meaningful predictions from visual data and much more all the code examples in the book are based on opency 3 1 the latest version who this book is for this is the perfect book for anyone who wants to dive into the exciting world of image processing and computer vision this book is aimed at programmers with a working knowledge of c prior knowledge of opency or computer vision machine learning is not required what you will learn explore the steps involved in building a typical computer vision machine learning application understand the relevance of opency at every stage of building an application harness the vast amount of information that lies hidden in images into the apps you build incorporate visual information in your apps to create more appealing software get acquainted with how large scale and popular image editing apps such as instagram work behind the scenes by getting a glimpse of how the image filters in apps can be recreated using simple operations in opency appreciate how difficult it is for a computer program to perform tasks that are trivial for human beings get to know how to develop applications that perform face detection gender detection from facial images and handwritten character digit recognition in detail computer vision and machine learning concepts are frequently used in practical computer vision based projects if you re a novice this book provides the steps to build and deploy an end to end application in the domain of computer vision using opency c at the outset we explain how to install opency and demonstrate how to run some simple programs you will start with images the building blocks of image processing applications and see how they are stored and processed by opency you II get comfortable with opency specific jargon mat point scalar and more and get to know how to traverse images and perform basic pixel wise operations building upon this we introduce slightly more advanced image processing concepts such as filtering thresholding and edge detection in the latter parts the book touches upon more complex and ubiquitous concepts such as face detection using haar cascade classifiers interest point detection algorithms and feature descriptors you will now

begin to appreciate the true power of the library in how it reduces mathematically non trivial algorithms to a single line of code the concluding sections touch upon opency s machine learning module you will witness not only how opency helps you pre process and extract features from images that are relevant to the problems you are trying to solve but also how to use machine learning algorithms that work on these features to make intelligent predictions from visual data style and approach this book takes a very hands on approach to developing an end to end application with opency to avoid being too theoretical the description of concepts are accompanied simultaneously by the development of applications throughout the course of the book the projects and practical real life examples are explained and developed step by step in sync with the theory

many companies have built data warehouses dws and have embraced business intelligence bi and analytics solutions even as companies have accumulated huge

amounts of data however it remains difficult to provide trusted information at the right time and in the right place the amount of data collected and available throughout the enterprise continues to grow even as the complexity and urgency of receiving meaningful information continues to increase producing meaningful and trusted information when it is needed can only be achieved by having a proper information architecture in place and a powerful underlying infrastructure the amounts of data to mine cleanse and integrate are becoming so large that increasingly the infrastructure is becoming the bottleneck this results in low refresh rates of the data in the data warehouse and in not having the information available in time where it is needed and even before information can become available in a bi dashboard or a report many preceding steps must take place the collection of raw data integration of data from multiple data stores business units or geographies transformation of data from one format to another cubing data into data cubes and finally loading changes to data in the data warehouse combining the complexity of the information requirements the growing amounts of data and multiple layers of the information architecture requires an extremely powerful infrastructure this ibm redquidetm publication explains how you can use ibm system z as the foundation for your information management architecture the system z value proposition for information management is fueled by the traditional strengths of the ibm mainframe the specific strengths of db2 for z os and the broad functionality of the ibm information management software portfolio for decades system z has proven its ability to manage vast amounts of mission critical data for many companies throughout the world your data is safe on system z the available information management functionality on system z has grown from database management systems to a full stack of solutions including solutions for content management master data management information integration data warehousing and business intelligence and analytics the availability of linux on system z provides an excellent opportunity to place certain components in an easy to manage and scalable virtualized linux server while benefitting from the system z hardware strengths db2 on z os can remain the operational data store and the underlying database for the data warehouse the next generation of system z is growing into a heterogeneous architecture with which you can take advantage of system z managed accelerators running on ibm system x or ibm power blades the first of these accelerators is the ibm smart analytics optimizer for db2 for z os v1 1 an all in one solution in which system z z os db2 on z os an ibm bladecenter and ibm storage work together to accelerate certain gueries by one to two orders of magnitude with the ibm smart analytics optimizer slices of data are periodically offloaded from db2 on z os to the bladecenter after a guery is launched against that data it will automatically run against the data kept on the bladecenter the bladecenter will process the query an order of magnitude faster than db2 on z os because all data is cached in internal memory on the bladecenter and special compression techniques are

used to keep the data footprint small and efficient as a solid information management architecture ready for the future system z has it all
