unraveling the voynich codex reviews the historical botanical zoological and iconographic evidence related to the voynich codex one of the most enigmatic historic texts of all time the bizarre voynich codex has often been referred to as the most mysterious book in the world discovered in an italian catholic college in 1912 by a polish book dealer wilfrid voynich it was eventually bequeathed to the beinecke rare book and manuscript library of yale university it contains symbolic language that has defied translation by eminent cryptologists the codex is encyclopedic in scope and contains sections known as herbal pharmaceutical balenological nude nymphs bathing in pools astrological cosmological and a final section of text that may be prescriptions but could be poetry or incantations because the vellum has been carbon dated to the early 15th century and the manuscript was known to be in the collection of emperor rudolf ii of the holy roman empire sometime between 1607 and 1622 current dogma had assumed it a european manuscript of the 15th century however based on identification of new world plants animals a mineral as well as cities and volcanos of central mexico the authors of this book reveal that the codex is clearly a document of colonial new spain furthermore the illustrator and author are identified as native to mesoamerica based on a name and ligated initials in the first botanical illustration this breakthrough in voynich studies indicates that the failure to decipher the manuscript has been the result of a basic misinterpretation of its origin in time and place tentative assignment of the voynichese symbols also provides a key to decipherment based on mesoamerican languages a document from this time free from filter or censor from either spanish or inquisitorial authorities has major importance in our understanding of life in 16th century mexico publisher s note for the ebook editions voynichese symbols are only rendered properly in the pdf format

this book presents an original approach to the study of psychiatry that is based on a justified epistemological position which demands that both the natural and the human social sciences are necessary in developing our understanding psychiatry as a medical specialism was constructed in the nineteenth century through the interplay of both the natural sciences and the human social sciences this interplay has created a hybrid discipline that spans biological and socio cultural historical domains which has raised challenges for its understanding and research this book focuses on one of the principal challenges how can we explore mental symptoms and mental disorders as complexes of neurobiology on the one hand and meaning on the other the chapters in this book dedicated to germán e berrios founder of the cambridge school of psychopathology tackles distinctive aspects of psychopathology or related areas by means of a combination of approaches chapters seek to unfold another element in our understanding of this field as well as raise new directions for its further study rethinking psychopathology is a valuable resource for clinical psychologists and psychotherapists psychological researchers historians of psychology cultural psychologists critical psychologists social scientists philosophers of psychology and philosophers of science

the purpose of this volume is to look at the developments and changes that have occurred in the area of mental workload and its assessment since the nato symposium was held in 1979 this has been achieved by inviting prominent researchers to survey their respective areas of expertise examined are the current methodologies individual differences unanswered questions and future directions for the mental workload issue particular topics discussed include the properties of workload assessment techniques physiological measures heart rate variability

effort and fatigue in relation to the workload experienced during normal daily routines subjective assessment techniques and the cognitive psychology of subjective workload a preliminary proposal for a cohesive model of mental load is presented a bibliographic listing of contemporary research reports completes the volume

it is widely accepted that innovation is key to economic growth countries where research and innovation are high on the national agenda are best suited to prosper in the knowledge based economy conversely countries whose economies are mainly dependent on natural resources and basic industries tend to lack competitiveness and flexibility in adapting to changing global trends the organisation for economic co operation and development oecd has long been concerned with the measurement of research and experimental development r d and innovation activities under apartheid rule south africa was barred from participating in oecd activities shortly after the advent of democracy in south africa in 1994 the then department of arts culture science and technology now the department of science and technology initiated the process of applying for observer status on the oecd committee for scientific and technological policy south africa gained observer status in 1998 in march 2001 the department and the oecd jointly hosted an international seminar in pretoria on the measurement of innovation activities in oecd and non oecd countries this book is a collection of selected papers that were presented at the seminar by leading international and south african experts in innovation measurement the chapters reflect various aspects of the measurement of innovation and how these measurements are applied in different countries the volume contributes to the debate that exists between developing and developed countries on their approaches to the measurement of innovation

the need exists in the private sector and government manufacturing sites to reduce product development time production lead times inventory and non value added activities at the same time there is increased pressure to

improve manufacturing process yields production efficiency and resource utilization much of the technology required to meet these needs already exists but an integrated structure that can demonstrate the potential for the technology in a concurrent engineering context does not this book provides a road map for building the integrated technology environment to evaluate existing products manufacturing processes and system design tools this book details innovative approaches that will significantly improve design manufacturing technology development and deployment capabilities for civilian and defense applications these approaches are integrated product process and system design ippsd initiatives which will greatly enhance the manufacturing competitiveness of the economy these approaches involve the use of simulation modeling tools and computerized virtual workstations in conjunction with a design environment which allows a diverse group of researchers manufacturers and suppliers to work within a comprehensive network of shared knowledge the ippsd infrastructure consists of virtual workstations servers and a suite of simulation quantitative computational analytical experimental and qualitative tools such an ippsd infrastructure will permit effective and efficient predictions of complete product design manufacturing process design and customer satisfaction

the issues explored in this book have unfortunately come to be known as maternal fetal conflicts the phrase is unsatisfactory because it is misleading it places the emphasis on the well being of the fetus instead of on the born child who will bear the burden of any harm done prenatally it assumes a conflict between a pregnant woman and her offspring while the issue is usually more complex and more broadly based and it incorrectly implies that all pregnant women are appropriately regarded as mothers for these reasons i have chosen to avoid the phrase maternal fetal conflict altogether and will instead speak in terms of preventable prenatal harm i mention this at the outset for those of you familiar with maternal fetal conflicts who might be wondering if i am addressing the same issues yes but i am trying to look at them in a new and i hope more fruitful way i would like to thank the other participants in the hastings center's maternal fetal project especially those who disagreed with me for being so thought provoking and i owe a lasting debt of gratitude to henry ruth and allen buchanan for their invaluable counsel

low lying countries such as the netherlands are strongly dependent on good and safe sea defences in the past the design of dikes and revetments was mostly based on vague experience rather than on general valid calculation methods the demand for reliable design methods for protective structures has in the netherlands resulted in increased research in this field these contributions have been prepared by dutch experts participating in the study groups of the technical advisory committee on water defences the book opens with an outline of general strategy and methodology on sea defences illustrated in the following chapters by technical information on specific items and dutch experience and it ends with more general aspects such as probabilistic approach integral multifunctional design management safety assessment together these chapters provide an almost complete technical overview of the items needed for the design and maintenance of dikes and revetments the enclosed cress program allows for an initial estimation of hydraulic loads and preliminary design

the past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise since pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste however as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form three major questions usually arise when a particular type of pollution has been identified 1 how serious is the pollution 2 is the technology to abate it available

and 3 do the costs of abatement justify the degree of abatement achieved this book is one of the volumes of the handbook of environmental engineering series the principal intention of this series is to help readers formulate answers to the last two questions above the traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control however the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken

computer interfaces and documentation are notoriously difficult for any user regardless of his or her level of experience advances in technology are not making applications more friendly introducing concepts from linguistics and language teaching language and communication proposes a new approach to computer interface design the book explains for the first time why the much hyped user friendly interface is treated with such derision by the user community the author argues that software and hardware designers should consider such fundamental language concepts as meaning context function variety and equivalence she goes on to show how imagining an interface as a new language can be an invaluable design exercise calling into question deeply held beliefs and assumptions about what users will or will not understand written for a wide range of computer scientists and professionals and presuming no prior knowledge of language related terminology this volume is a key step in the on going information revolution

## **Organizational Stress Management 1997-05-15**

this volume presents a series of case studies at different levels of inclusivity of how organisms exhibit functional convergence as a key evolutionary mechanism resulting in responses to similar environmental constraints in mechanically similar ways the contributors to this volume have selected and documented cases of convergent evolution of form and function that are perceived to be driven by environmental abiotic and or biotic challenges that fall within their areas of expertise collectively these chapters explore this phenomenon across a broad phylogenetic spectrum the sequence of chapters follows the organizational principle of increasing phylogenetic inclusivity rather than the clustering of chapters by perceived similarity of the phenotypic features or biomechanical challenges being considered this is done to maintain focus on the evolutionary phenomenon that is the primary subject matter of the book thereby providing a basis for discussion among the readership about what is necessary and sufficient to justify the recognition of functional convergence all chapters stress the need for integrative approaches for the elucidation of both pattern and process as they relate to convergence at various taxonomic levels
