this manual presents procedures for performing advanced laboratory tests on fine grained soils it covers characterization tests which determine soil composition and quantify the individual components of a soil and behavioral tests such as the atterberg limits tests that demonstrate how the fines fraction of a soil reacts when mixed with water and the linear

shrinkage test that demonstrates how much a soil shrinks the material goes beyond traditional evaluation of basic soil behavior by presenting more advanced laboratory tests to characterize soil in more detail these tests provide detailed compositional characteristics which identify subtle changes in conditions and vertical variations in the soil and which help to explain unusual behavior a unique compilation of information on key soil tests combines characterization tests with behavior tests the book suits graduate students in geotechnical engineering as well as practitioners and researchers

exactly 35 years after the first colloquium was held the eleventh international plant nutrition colloquium took place from 30 july to 4 august 1989 in wageningen the netherlands although impressive progress has been made during the past decades in our understanding of the mechanisms of uptake distribution and assimilation of nutrients in relation to crop yield and quality there are still significant gaps in our insight into many fundamental aspects of plant mineral nutrition and related metabolic processes in spite of improved knowledge of nutrient requirements of crops and improved fertilizer application strategies the world population remains to be burdened with an enormous shortage of plant products for food timber fuel shelter and other purposes the main challenge facing the plant nutrition research community is to at least alleviate the increasing world wide need for applying scientific knowledge to practical problems in agriculture horticulture and forestry it is therefore felt by many scientists that the plant nutrition colloquia which are intended to bring together scientists and to integrate knowledge and approaches acquired in plant physiology biochemis try soil science agronomy and related disciplines have indeed made a significant contribution to the advancement of our knowledge and understanding in this vital and interdisciplinary field of agrobiolgy about 260 scientists from 40 nations attended the colloquium in wageningen

iron is a major constituent of the earth crust however under alkaline conditions commonly found in arid and semi arid environments iron becomes unavailable to plants when plants are affected by a shortage of iron their leaves become yellow chlorotic and both plant growth and crop yield are reduced the roots of plants affected by iron deficiency may develop a series of responses directed to improve iron uptake such as increased proton excretion and iron reduction capabilities or excretion of iron chelators called siderophores iron deficiency affects major crops worldwide including some of major economic importance such as fruit trees and others correction of iron deficiency is usually implemented through costly application of synthetic chelates since these correction methods are very expensive the competitiveness of farmers is often reduced and iron deficiency may become a limiting factor for the maintenance introduction or expansion of some crops in spite of the many years devoted to the study of iron deficiency the knowledge of iron deficiency in soils and plants is still fragmentary in many aspects we have only incomplete information on the processes at the molecular level that make some plant species and cultivars unable to take and utilize iron from the soil whereas other plants grow satisfactorily under the same conditions

uranium is an element to be found ubiquitous in rock soil and water uranium concentrations in natural ground water can be more than several hundreds $\mu\text{g l}$ without impact from mining nuclear industry and fertilizers considering the who recommendation for drinking water of $15 \mu\text{g l}$ has been as low as $2 \mu\text{g l}$ before due to the chemical toxicity of uranium the element uranium has become an important issue in environmental research besides natural enrichment of uranium in aquifers uranium mining and milling activities further uranium processing to nuclear fuel emissions from burning coal and oil and the application of uranium containing phosphate fertilizers may enrich the natural uranium concentrations in soil and water by far in october 1995 the first international conference on uranium mining and hydrogeology umh i was held in freiberg being organized by the department of geology at the technical university bergakademie freiberg by the support of the saxon state ministry of geology and environment due to the large scientific interest in the topic of uranium a second conference umh ii took place in freiberg in september 1998 furthermore in september 2002 scientists working on the topic of uranium mining and hydrogeology attended the third conference umh iii which was jointly held together with the international mine water sociation imwa symposium 2002 the reviewed papers and posters of the 2002 conference have been published by springer entitled uranium in the aquatic environment edited by merkel planer friedrich and wolkersdorfer
