A Dark History of Modern Philosophy

2017-08-14

this provocative reassessment of modern philosophy explores its nonrational dimensions and connection to ancient mysteries delving beneath the principal discourses of philosophy from descartes through kant bernard freydberg plumbs the previously concealed dark forces that ignite the inner power of modern thought he contends that reason itself issues from an implicit and unconscious suppression of the nonrational even the modern philosophical concerns of nature and limits are undergirded by a dark side that dwells in them and makes them possible freydberg traces these dark sources to the poetry of hesiod the fragments of heraclitus and parmenides and the platonic dialogues and claims that they rear their heads again in the work of spinoza schelling and nietzsche freydberg does not set forth a critique of modern philosophy but explores its intrinsic continuity with its ancient roots

philosophers writers and poets who draw insights from material life diane enns shines a light on the limits of erotic love exploring its paradoxes through personal and philosophical reflections situating experience at the center of her inquiry enns conducts philosophy by another name elaborating the ambiguities and risks of love with visceral clarity love in the dark claims that intimacy must accept risk as long as love does not destroy the self erotic love inspires an inexplicable affirmation of another but can erode autonomy and vulnerability there is a limit to love and appreciating it requires a rethinking of love s liberal paradigms which enns traces back to the hostility toward the body and eros in christianity and the western philosophical tradition against a legacy of an abstract and sanitized love enns recasts erotic attachment as an event linked to conditional circumstances the value of love lies in its intensity and depth and its end does not negate love s truth or significance writing in a lyrical genre defying style enns delineates the paradoxes of love in its relations to lust abuse suffering and grief to reach an account faithful to human experience

an intellectual history of the philosophers who grappled with the problem of evil and the case for why pessimism still holds moral value for us today in the seventeenth and eighteenth centuries philosophers engaged in heated debates on the question of how god could have allowed evil and suffering in a creation that is supposedly good dark matters traces how the competing philosophical traditions of optimism and pessimism arose from early modern debates about the problem of evil and makes a compelling case for the rediscovery of pessimism as a source for compassion consolation and perhaps even hope bringing to life one of the most vibrant eras in the history of philosophy mara van der lugt discusses legendary figures such as leibniz hume voltaire rousseau kant and schopenhauer she also introduces readers to less familiar names such as bayle king la mettrie and maupertuis van der lugt describes not only how the earliest optimists and pessimists were deeply concerned with finding an answer to the question of the value of existence that does justice to the reality of human suffering but also how they were fundamentally divided over what such an answer should look like a breathtaking work of intellectual history by one of today s leading scholars dark matters reveals how the crucial moral aim of pessimism is to find a way of speaking about suffering that offers consolation and does justice to the fragility of life

friedrich wilhelm joseph schelling is widely regarded as one of the most difficult and influential of german philosophers in this book s j mcgrath not only makes schelling s ideas accessible to a general audience he uncovers the romantic philosopher s seminal role as the creator of a concept which shaped and defined late nineteenth and early twentieth century psychology the concept of the unconscious mcgrath shows how the unconscious originally functioned in schelling s philosophy as a bridge between nature and spirit before freud revised the concept to fit his psychopathology the unconscious was understood largely along schellingian lines as primarily a source of creative power schelling s life long effort to understand intuitive and non reflective forms of intelligence in nature humankind and the divine has been revitalised by jungians as well as by archetypal and trans personal psychologists with the new interest in the unconscious today schelling s ideas have never been more relevant the dark ground of spirit will therefore be essential reading for those involved in psychoanalysis analytical psychology and philosophy as well as anyone with an interest in the history of ideas

in 1997 and 1998 the american secular philosopher richard rorty published a set of predictions about the twenty first century ranging from the years 2014 95 he predicted for instance the election of a strong man in the 2016 presidential race and the proliferation of gun violence starting in 2014 he labels the years from 2014 44 the darkest years of american history politics and society from 2045 95 rorty thinks his own vision for social hope will be implemented within american society a vision that includes charity in the pauline sense solidarity and sympathy rorty considers himself a leftist liberal and a philosopher of hope so why would a philosopher of hope predict such darkness and despair in the dark years philosophy politics and the problem of predictions philosopher and political theorist jacob l goodson explains the fullness of rorty s predictions the problem of making predictions within the social sciences and the reasons why even rorty s vision for life after the dark years fails us on the standards of hope goodson argues that we ought to challenge the monopoly that american politics has

a unique analysis of the conflicting views toward judaism reflected in the work of hegel and nietzsche this brilliant and absorbing study examines the image of judaism and the jews in the work of two of the most influential modern philosophers hegel and nietzsche hegel was a proponent of universal reason and nietzsche was its opponent hegel was a christian thinker and nietzsche was a self proclaimed antichrist hegel strove to bring modernity to its climax and nietzsche wanted to divert the evolution of modernity into completely different paths in view of these conflicting attitudes and philosophical projects how did each assess the historical role of the jews and their place in the modern world the mature hegel partly overcame the fierce anti jewish attitude of his youth yet continued to see judaism as the alienation of its own new principles post christian judaism no longer had a real history only a contingent protracted existence and although modern jews deserved civil rights hegel saw no place for them in modernity as jews nietzsche on the contrary who grew to be a passionate anti anti semite admired diaspora jews for their power and depth and assigned them a role as jews in curing europe of the decadent christian culture that their own ancestors the second temple jewish priests had inflicted upon europe by begetting christianity the ancient corrupters of europe are thus to be its present redeemers through his masterly analysis of the writings of hegel and nietzsche yovel shows that anti jewish prejudice can exist alongside a philosophy of reason while a philosophy of power must not necessarily be anti semitic

dark matter was not matter at all it was a theoretical brainteaser that finally philosophy had to unscramble scientists of today do not like this idea but philosophy is capable to deal with theoretical conundrums like dark matter first chapter which is like a combat between mathematical counterintuitive physics and human commonsense explains that human commonsense equipped with proper philosophical approach is capable to deal with the problem of dark matter after making a case for philosophical method this book then challenges the fundamental convictions of the established cosmology and explains that even many visible galaxies are located at light travel distance of many hundred billion light years there is no dark matter in any of the so called proofs of the existence of dark matter and mond is also an engineered and artificial solution this book has solved galactic rotation problem using newton s theory and have shown that available theory was capable to explain the flat rotation curves of galaxies without necessitating the existence of dark matter thus theory itself is not challenged blamed or modified however understanding of scientists of their so called counterintuitive theories is blamed for example to deal with the galactic rotation problem the relevant part of newton s principia mathematica was proposition lxxiii theorem xxxiii whereas to deal with this problem scientists had wrongfully applied proposition lxxi theorem xxxi obviously inaccurate application of available theory resulted in a fake problem and dark matter only served as a ghost solution to that bogus problem not only the galactic rotation other so called indicators of dark matter like cluster dynamics gravitational lensing bullet cluster dark matter ring fluctuations in cmb temperature and structures formation etc also have been explained without requiring the need for dark matter overall this book has presented a strong case of the failure of counterintuitive regime of established cosmology and physics

any of these things because human nature does not exist at least not as we usually think of it flying in the face of major trends in evolutionary psychology and related fields he offers a provocative and compelling argument in this book that the only thing humans are hardwired for is freedom freedom from evolutionary instinct and freedom to adapt to a variety of environmental and cultural contexts everett sketches a blank slate picture of human cognition that focuses not on what is in the mind but rather what the mind is in namely culture he draws on years of field research among the amazonian people of the pirahã in order to carefully scrutinize various theories of cognitive instinct including noam chomsky s foundational concept of universal grammar freud s notions of unconscious forces adolf bastian s psychic unity of mankind and works on massive modularity by evolutionary psychologists such as leda cosmides john tooby jerry fodor and steven pinker illuminating unique characteristics of the pirahã language he demonstrates just how differently various cultures can make us think and how vital culture is to our cognitive flexibility outlining the ways culture and individual psychology operate symbiotically he posits a buddhist like conception of the cultural self as a set of experiences united by various apperceptions episodic memories ranked values knowledge structures and social roles and not in any shape or form biological instinct the result is fascinating portrait of the dark matter of the mind one that shows that our greatest evolutionary adaptation is adaptability itself

the new geological epoch we call the anthropocene is not just a scientific classification it marks a radical transformation in the background conditions of life on earth one taken for granted by much of who we are and what we hope for never before has a species possessed both a geological scale grasp of the history of the earth and a sober understanding of its own likely fate our situation forces us to confront questions both philosophical and of real practical urgency we need to rethink who we are what agency means today how to deal with the passions stirred by our circumstances whether our manner of dwelling on earth is open to change and ultimately what is to be done our future that of our species and of all the fellow travelers on the planet depend on it the real world consequences of climate change bring new significance to some very traditional philosophical questions about reason agency responsibility community and man s place in nature the focus is shifting from imagining and promoting the good life to the survival of the species deep time dark times challenges us to reimagine ourselves as a species taking on a geological consciousness drawing promiscuously on the work of nietzsche heidegger foucault derrida deleuze and other contemporary french thinkers as well as the science of climate change david wood reflects on the historical series of displacements and de centerings of both the privilege of the earth and of the human from copernicus through darwin and freud to the declaration of the age of the anthropocene he argues for the need to develop a new temporal phronesis and to radically rethink who we are in respect to solidarity with other humans and responsibility for the nonhuman stakeholders with which we share the planet in these brief lively chapters wood poses a range of questions centered on our individual and collective political agency might not human exceptionalism be reborn as a sort of hyperbolic responsibility rather than privilege
