over the next five to 10 years wireless technologies will dramatically reshape the communications and information infrastructure of the united states new radio based systems now being developed will use advanced digital technologies to bring a wide array of services to both residential and business users

including ubiquitous mobile telephone and data services and many new forms of video programming existing wireless systems including radio and television broadcasting cellular telephony and various satellite and data networks will also convert to digital technology this will allow them to improve the quality of their services expand the number of users they can serve and offer new information and entertainment applications before the benefits of these wireless systems can be realized however technical regulatory and economic uncertainties must be resolved this report examines the role wireless communication technologies will play in the evolving national information infrastructure nii examines the challenges facing policy makers and regulators as wireless becomes a more integral part of the telecommunications and information infrastructure and identifies some of the longer term implications of the widespread use of wireless systems and services

Reliable Computer Systems

1998-12-15

paving the way for an open service market we live in an age when powerful communications technology is becoming available to everyone from our home we can send and receive not only analogue voice but also growing volumes of digital information and even intelligence in the form of agents we are becoming increasingly mobile and are expecting the same level of connectivity in the home in the office and on the road the regulatory and commercial environment in which we communicate is changing the telecommunications market is becoming increasingly competitive the internet is erasing the borders between information technology and telecommunications and the way we do business is ever more dominated by electronic exchanges of information is our technology ready for the open market of networks and services can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people the challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone in a way that everyone can easily use the sixth international conference on intelligence in services and networks is n 99 is all about technology for paving the way to the open services market since the first is n conference in 1992 the focus of the is n program has continually shifted we see existing technologies maturing while new ones emerge but the bottom line has always been putting technology at the service of the people
