has surrounded the Australian government's environmental plans from 2008 to 2012 and the conflicting positions of Australian trade unions on environmentally transitioning the world of work. Interviews with key political and economic actors provide in-depth and nuanced understandings of the varied perspectives of political and union leaders in Australia. The second part of the book presents a detailed case study of the proposed green job solution within the specific context of the Australian automotive manufacturing industry. The case study is also informed by interviews with key industry union and policymakers. The automotive industry is scrutinized not only because it has expressed going green as important to its long-term economic future but because the Australian government declared that its \$6.2 billion New Car Plan for a greener future policy would create green jobs. Therefore, the book engages with the task of examining the three multinational vehicle producers operating in Australia: Ford, GM, Holden, and Toyota, and how they have responded and engaged with the idea of green jobs, greening the manufacturing process, and the vehicles they produce in Australia.
