Federal Register 2013-06 using administrative tax records for uk businesses we document both bunching in annual turnover below the vat registration threshold and persistent voluntary registration by almost half of the firms below the threshold we develop a conceptual framework that can simultaneously explain these two apparently conflicting facts the framework also predicts that higher intermediate input shares lower product market competition and a lower share of business to consumer b2c sales lead to voluntary registration the predictions are exactly the opposite for bunching we test the theory using linked vat and corporation tax records from 2004 2014 finding empirical support for these predictions
