incontinence is a very common and often devastating problem but one that goes largely unacknowledged in order to elucidate the underlying mechanisms of this major clinical condition this symposium brought together neuroscientists working on the basic biology of the bladder and bowel and clinicians dealing with

the various manifestations of urinary and fecal incontinence the resulting coverage is broad and includes papers on the innervation and functional anatomy of the urinary tract and anorectal region and the central neural control of these areas other contributions discuss the functional assessment of the anorectum and bladder stress incontinence and the neurogenic hypothesis of incontinence detrusor external sphincter dyssynergia and pharmacological and surgical approaches to treatment

encyclopedic in scope reversibility of chronic degenerative disease and hypersensitivity volume 2 the effects of environmental pollutants on the organ system draws deeply from clinical histories of thousands of patients it focuses on clinical syndromes within the musculoskeletal gastrointestinal and respiratory systems the book explores mechanisms of chemical sensitivity and chronic degenerative disease as well as

the triggering agents of musculoskeletal gastrointestinal and sino respiratory diseases it then discusses triggering agents such as natural gas pesticides solvents and micotoxins the authors include new data for indoor and outdoor air pollution that harms the chemically sensitive and chronic degenerative diseased patient as well as new data for breath analysis they also describe the physiology of chemical sensitivity and chronic degenerative diseases their manifestations diagnosis and approaches to reverse dysfunction the second volume of a five volume set the book provides an essential resource for health care providers diagnosing and treating chemical sensitivity and chronic degenerative disease
