# Edinburgh Medical Journal 1898

the present volume attempts to capture some of this excitement by providing a cross section of contemporary research in mass transfer and thermal processes in the modern engineering materials and technologies the volume spans both experiment and modelling and covers both basic research and applied research topics covered are broad covering heat exchange in porous media to the drying of sisal fibre from the role of nanoparticles for enhanced oil recovery to the atomistic of grain boundary diffusion and segregation

# Statistical Register 1891

the american journal of mathematics publishes research papers and articles of broad appeal covering the major areas of contemporary mathematics

## Messenger of mathematics 1892

this volume encompasses many aspects of intelligent transportation technology bridge monitoring and maintenance road engineering and materials science volume is indexed by thomson reuters cpci s was the 67 peer reviewed papers are grouped into 3 chapters intelligent transportation technique bridge monitoring safety and maintenance advanced techniques in road engineering and materials science

**Report of the Quarter-Master-General, State of Connecticut, to the General Assembly ... 1886**

vibration tests were conducted on a 1/24 scale model of the north fork dam a double curvature arch dam to determine natural frequencies

mode shapes and damping ratios the measured results were compared with results calculated using a linear elastic three dimensional finite element method the objective of the study was to evaluate the use of physical models and three dimensional finite element methods for earthquake response predictions mode shapes frequencies and damping ratios were determined from vibration tests of the model using two vibrators mounted on the crest of the dam and from tests with a vibrator mounted at the base of the dam on the downstream foundation the modal analysis of the dam was performed using a three dimensional finite element computer program the structural analysis program the dam was modeled with 110 solid elements and 278 nodes and with the boundary totally fixed at the canyon walls the reservoir was assumed to exert a static water pressure on the dam this load the mass of the vibrators and an apparent mass based on an approximation by westergaard to account for the mobilized water were included in the analysis the rayleigh ritz technique was used to determine mode shapes and frequencies modified author abstract
