A Sufficient Criterion for a Cone to be Area-Minimizing 1991 one of the fundamental objects of study in geometric measure theory is an area minimizing surface a compact k dimensional surface with boundary is called area minimizing if no other surface with the same boundary has less surface area an area minimizing surface can have singularities the main purpose of this paper is to investigate some of the shapes that such singularities can have a key concept in this study is that of an area minimizing cone we present a general method for proving that a cone with an isolated singularity is area minimizing the calculation involves the curvature second fundamental form and a sort of embedding radius of the normal bundle to the cone we can also prove that certain cones are not area minimizing using this method we complete the classification of minimizing cones over products of spheres we also give other examples including the first known unorientable minimizing cones the method also lends itself to perturbation arguments we show that certain surfaces are area minimizing in a small neighborhood of an isolated singularity

Official Gazette of the United States Patent Office 1903 the international conference orbis scientiae 1996 focused on the topics the neutrino mass light cone quantization monopole condensation dark matter and gravitational waves which we have adopted as the title of these proceedings was there any exciting news at the conference maybe it depends on who answers the question there was an almost unanimous agreement on the overall success of the conference as was evidenced by the fact that in the after dinner remarks by one of us bnc the suggestion of organizing the conference on a biannual basis was presented but not accepted the participants wanted the continuation of the tradition to convene annually we shall of course comply the expected observation of gravitational waves will constitute the most exciting vindication of einstein's general relativity this subject is attracting the attention of the experimentalists and theorists alike we hope that by the first decade of the third millennium or earlier gravitational waves will be detected opening the way for a search for gravitons somewhere in the universe presumably through the observations in the cmb the theoretical basis of the graviton search will take us to quantum gravity and eventually to the modification of general relativity to include the planck scale behavior of gravity at energies 19 of the order of 10^{19} ge v

Code of Federal Regulations 1986 the content in this work is fiction fiction in the sense that the main character through which the eyes of this metaphysical

and philosophical journey is viewed charlie is not a real character nor are his counterparts and foils through which he explores various topics such as love the meaning of existence or the origins of the cosmos and how our understanding of these abstract ideas have evolved since the dawn of civilization but like any work of fiction the characters do have some basis in real experience from which of course nothing can be created the intent of the work is to explore the foundations and evolution of knowledge and the boundaries between reason and faith boundaries which from the authors perspective are not quite as clear as some might have us believe and the point of going through the exercise the purpose as it were is not only for the author to come to a better understanding of how all our modern branches of science hang together how they have come to be given their socio political and historical context but also for others to share in his journey and perhaps learn something along the way since the birth of language and thought even going back thousands of years and even prior to the dawn of civilization itself mankind has attempted to answer two fundamental questions questions that have spurred countless creative forces and branches of thought over the centuries namely who we are and from whence we came the answers to these questions no matter what race religion or creed the seeker might be or what philosophy or religion they might adhere to are inextricably linked to each other this journey of trying to understand our place in the world and the origins of the universe itself is an ageless quest that in many respects distinguishes mankind from the rest of the creatures on the planet furthermore this very same quest to answer the same questions fuels not only scientific development but also is the basis for theology and religion both approaching the same set of questions with a different set of tools and with a different mindset but both trying to answer the same set of basic questions as to who we are and how we got here from the authors perspective in order to answer these questions effectively in the information age we should have at least some understanding of the history of our answers to these questions as they have evolved over time for we all build our collective knowledge on those that have come before us whether we recognize this or not and in turn that in building this bridge a common metaphor used throughout the work we must leverage the tool of metaphysics a term originally coined by aristotle but in the context of this work implies a level of abstraction that sits above physics as we understand it in todays world but also provides a conceptual underpinning to all of the branches of knowledge that collectively make up our understanding of the world and our place in it in doing so it is the authors hope that we can not only come to a more complete and fuller understanding of the answers to these basic human questions that have plagued mankind since time immemorial but also at the same time perhaps develop a deeper understanding of the problems of life in the information age and how we might best approach them or cope with them in way that not only benefits ourselves as individuals but to society as a whole to which our individual well being depends upon whether or not we recognize it or not
