sustainability we use a natural experiment framework in which the timing of discoveries is treated as an exogenous source of within country variation we combine data on government debt fiscal stress and debt distress episodes on a large panel of countries over 1970 2012 with a global repository of giant oil gas and mineral discoveries we find strong and robust evidence of a fiscal presource curse i e natural resources can jeopardize fiscal sustainability even before the first drop of oil is pumped specifically we find that giant discoveries mostly of oil and gas lead to permanently higher government debt and eventually debt distress episodes specially in countries with weaker political institutions and governance this evidence suggest that the curse can be mitigated and even prevented by pursuing prudent fiscal policies and borrowing strategies strengthening fiscal governance and implementing transparent and robust fiscal frameworks for resource management the external debt burden of many low income developing countries has increased significantly since the 1970s developments in a sample of ten countries show that the main factors behind the buildup of debt were 1 exogenous adverse terms of trade shocks or weather 2 a lack of sustained macroeconomic adjustment and structural reforms 3 nonconcessional lending arid refinancing policies of creditors 4 inadequate debt management and 5 political factors civil war and social strife future policies should limit the need for external financing and create an environment conducive to diversifying export growth managing own personal experiences the author helps couples face fiscal foul ups and to discover god loves them even in the middle of financial difficulties international debt relief continues to be a highly controversial subject although many heavily indebted poor countries have received large amounts of debt relief over the past quarter of a century it doesn t appear to be enough this book examines the impact of international debt relief efforts since 1990 it assesses whether the various debt relief modalities have enhanced economic growth in eight highly indebted countries in latin america and africa dijstra argues that fundamental changes of the international aid and debt architecture are necessary to stop the flow of new multilateral loans and the possible perverse effects of conditionality this volume provides a pluralistic discussion from world renowned scholars on the international aspects of the debt crisis and prospects for resolution it provides a comprehensive evaluation of how the debt crisis has impacted western europe the emerging markets and latin america and puts forward different suggestions for recovery this book deals with the recent debt crises in developing countries and analyzes the design and implementation of the heavily indebted poor countries hipc initiative by providing background concepts pointing out the main drawbacks and suggesting a

different approach to debt sustainability and debt relief programs the authors merge academic operational and institutional expertise in order to provide an evaluation as complete and balanced as possible on the much debated effectiveness of debt relief in fostering economic growth reducing poverty and reaching debt sustainability marco arnone and andrea f presbitero assess the joint evolution of external and domestic public debt and produce original empirical evidence on the potential effects of public debt on investment economic growth and institution building in low and middle income countries the book also explores relevant and up to date policy issues such as the loans grants mix and the development of responsible lending strategies in foreign assistance the surge of non concessional and domestic borrowing by low income countries and the impact of the 2008 2009 global financial crisis on debt sustainability t he generational wars are about to begin competing for entitlements wrestling over taxes dancing around the deficit today s children and grandchildren are tomorrow s taxpayers and social fabric the authors of payment due contend that our current policies of federal overspending are setting those children up for economic disaster former representative tim penny d mn knows how volatile the politics of the situation are he retired because he couldn t locate in congress at large the institutional will or stomach to deal with the issues squarely political scientist steven schier understands the way in which the politics work against economics to solve the problem together they take us inside the capitol corridors to show us the lobbying arm twisting and pork barrel politicking that goes on to derail policies designed to reduce the federal deficit we get to play the washington monument game along with the worst of the offenders and to see firsthand how three schools of deficit thought the wolves pussycats and termites approach the prospect of cutting back federal outlays and weaning the great middle class from its own welfare dependency a hallmark of the book is its three tiered set of long term entitlement reform proposals complete with careful documentation of the contribution each recommended item makes toward reducing the federal deficit or at least slowing its increase along with suggested short term plans these proposals give students the opportunity to try to solve both short and long term problems students will appreciate the timeliness and relevance of the book s argument to their generation s future plight and all readers will benefit from the clear presentation of complex economic concepts and arguments essential to understanding the federal deficit debate and to confronting the political social and moral payments now coming due as a follow up to the executive board s may 2013 discussion this paper considers a possible direction for reform of the fund s lending framework in the context of sovereign debt vulnerabilities the primary focus of this paper relates to the fund s exceptional access framework since it is in this context that the fund will most likely have to make the difficult judgment as to whether the member s problems can be resolved with or without a debt restructuring the objective of the preliminary approaches set forth in this paper is to reduce the costs of crisis resolution for both creditors and debtors relative to the alternatives thereby benefitting the overall system these ideas are market based and their eventual implementation would require meaningful consultation with creditors on aug 10 1993 congress raised the debt ceiling to 4 9 trillion this debt ceiling was reached in the fall of 1995 but was not raised until mar 29 1996 the intervening period beginning on nov 15 1995 when the treasury secretary declared a debt issuance suspension period became known as the 1995 96 debt ceiling crisis treasury took several steps during this period to raise funds to meet federal obligations without exceeding the debt ceiling this report analyzes treasury s actions during the crisis related to investment and redemption in federal trust funds in 2007 countries in the euro periphery were enjoying stable growth low deficits and low spreads then the financial crisis erupted and pushed them into deep recessions raising their deficits and debt levels by 2010 they were facing severe debt problems spreads increased and surprisingly so did the share of the debt held by domestic creditors credit was reallocated from the private to the public sectors reducing investment and deepening the recessions even further to account for these facts we propose a simple model of sovereign risk in which debt can be traded in secondary markets the model has two key ingredients creditor discrimination and crowding out effects creditor discrimination arises because in turbulent times sovereign debt offers a higher expected return to domestic creditors than to foreign ones this provides incentives for domestic purchases of debt crowding out effects arise because private borrowing is limited by financial frictions this implies that domestic debt purchases displace productive investment the model shows that these purchases reduce growth and welfare and may lead to self fulfilling crises it also shows how crowding out effects can be transmitted to other countries in the eurozone and how they may be addressed by policies at the european level in may 2007 the imf and world bank boards discussed the paper strengthening debt management practices lessons
