Semiotics and Visual Communication

2014-04-11

This book is the result of selective research papers that were presented at the first international conference on semiotics and visual communication at the Cyprus University of Technology in November 2011. The conference was structured around the theme from theory to practice and brought together researchers and practitioners who study and evaluate the ways that semiotic theories can be analysed, perceived, and applied in the context of various forms in visual communication. Within a semiotic framework, the book explores research questions under five main thematic areas: architectural spatial design, design for three-dimensional products, design for print applications, design for screen-based media, pedagogy of visual communication, and visual arts. This volume will be an asset for people who have an interest in semiotics not only from a theoretical and historical perspective but also from an applied point of view, looking at how semiotic theory can be implemented into educational research, design, and visual communication practice. The book provides 25 essential contributions that demonstrate how the concepts and theories of semiotics can be creatively adapted within the interdisciplinary nature of visual communication.
