la industria aeroespacial es la segunda actividad más normada luego de las actividades nucleares está regida por infinidad de normas reglamentaciones directivas documentación específica y todo tipo de manuales de referencia obligatoria la gran mayoría llega a manos de usuarios operadores talleristas etc en idioma inglés el idioma de uso aeronáutico por naturaleza a ello se suma el hecho de que la industria aeronáutica no está aislada de las actividades humanas sino que interactúa se nutre y hace su aporte a ellas creando la necesidad de un sólido vínculo interdisciplinario ahora bien si bien conocemos la existencia de esta necesidad de creación de un fuerte vínculo interdisciplinario también sabemos que en esta tarea nos encontramos con una gran barrera en la comunicación a partir de esto es

posible considerar varios impedimentos en esa barrera uno de los más importantes es el idioma como factor concurrente está el uso de regionalismos y como consecuencia de ellos la aplicación de jergas específicas desde los albores de la aviación hemos convivido con ese problema sucede que al incrementarse día a día el número de operaciones al crecer el parque aeronáutico y convertirse la aviación en una necesidad para el resto de las actividades humanas las condiciones inseguras los incidentes y los accidentes continúan produciéndose quedando de manifiesto las falencias de la industria en ese aspecto las nuevas tecnologías en materiales los nuevos métodos de diseño y los planes de mantenimiento con técnicas de inspección no destructivas han reducido los riesgos latentes de fallas técnicas pero no todos los aspectos relacionados con la vida humana puede solucionarlos la tecnología por lo que en paralelo con los desarrollos tecnológicos se han creado conceptos de gestión del factor humano que han contribuido en gran medida a la seguridad operacional y desde el año 1978 su estudio y prevención se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interacción antropológica crm mrm loft shell etc la comunicación es un vínculo importantísimo en la seguridad operacional si trasladamos lo expuesto a las tareas diarias ya sea en la operación de una aeronave en el mantenimiento de la misma en el control del tránsito aéreo en la administración de las empresas operadoras o en cualquier otra actividad relacionada con la industria aeroespacial se presentará el problema del uso del idioma inglés los regionalismos y las jergas específicas factores tendientes a desencadenar una sucesión de eventos inseguros que podrían desembocar en un incidente o en un accidente de consecuencias catastróficas cuando se analiza la comunicación oral y escrita es importante tener en cuenta que si bien manejamos un vocabulario técnico en común es inevitable tanto en inglés como en español el uso de regionalismos y argot jargon en inglés por ejemplo un técnico ecuatoriano hablará de la bitácora de la aeronave mientras que uno argentino hablará de la libreta historial de la aeronave esta divergencia puede justificarse como un caso de regionalismos de países diferentes ahora bien en el segundo ejemplo el mismo técnico argentino en la provincia de buenos aires hablará de chavetas para frenar un bulón mientras que otro técnico argentino en córdoba hablará de cupillas para frenar un bulón en paralelo se puede ver también que los diferentes fabricantes tienen léxicos específicos con respecto a sus productos por ejemplo uno de los más conocidos fabricantes británicos de motores posee un sistema propio de códigos de denominación y aplicación de boletines de servicio no mandatorios muy distinto al que manejan sus competidores directos de estados unidos y Canadá
