this book offers a new history of drug use in sport it argues that the idea of taking drugs to enhance performance has not always been the crisis or evil we now think it is instead the late nineteenth century was a time of some experimentation and innovation largely unhindered by talk of cheating or health risks by the interwar period experiments had been modernised in the new laboratories of exercise physiologists still there was very little sense that this was contrary to the ethics or spirit of sport sports drugs and science were closely linked for over half a century the second world war provided the impetus for both increased use of drugs and the emergence of an anti doping response by the end of the 1950s a new framework of ethics was being imposed on the drugs question that constructed doping in highly emotive terms as an evil alongside this emerged the science and procedural bureaucracy of testing the years up to 1976 laid the foundations for four decades of anti doping this book offers a detailed and critical understanding of who was involved what they were trying to achieve why they set about this task and the context in which they worked by doing so it reconsiders the classic dichotomy of good anti doping up against evil doping winner of the 2007 lord aberdare literary prize for the best book in british sports history

despite several decades of attention there is still no consensus on the effects of racial or sexual discrimination in the united states in this landmark work the well known sociologist samuel lucas shows how discrimination is not simply an action that one person performs in relation to another individual but something far more insidious a pervasive dynamic that permeates the environment in which we live and work challenging existing literature on the subject lucas makes a clear distinction between prejudice and discrimination he maintains that when an era of condoned exploitation ended the era of contested prejudice as he terms it began he argues that the great strides made in the 1950s and 1960s repudiated
