1884

data sources such as simulations sensor networks across many application domains generate large volumes of time series data which exhibit characteristics that evolve over time visual data analysis methods can help us in exploring and understanding the underlying patterns present in time series data but due to their ever increasing size the visual data analysis process can become complex large data sets can be handled using data abstraction techniques by transforming the raw data into a simpler format while at the same time preserving significant features that are important for the user when dealing with time series data abstraction techniques should also take into account the underlying temporal characteristics this thesis focuses on different data

abstraction and pattern identification methods particularly in the cases of large 1d time series and 2d spatio temporal time series data which exhibit spatiotemporal discontinuity based on the dimensionality and characteristics of the data this thesis proposes a variety of efficient data adaptive and user controlled data abstraction methods that transform the raw data into a symbol sequence the transformation of raw time series into a symbol sequence can act as input to different sequence analysis methods from data mining and machine learning communities to identify interesting patterns of user behavior in the case of very long duration 1d time series locally adaptive and user controlled data approximation methods were presented to simplify the data while at the same time retaining the perceptually important features the simplified data were converted into a symbol sequence and a sketch based pattern identification was then used to identify patterns in the symbolic data using regular expression based pattern matching the method was applied to financial time series and patterns such as head and shoulders double and triple top patterns were identified using hand drawn sketches in an interactive manner through data smoothing the data approximation step also enables visualization of inherent patterns in the time series representation while at the same time retaining perceptually important points very long duration 2d spatio temporal eye tracking data sets that exhibit spatio temporal discontinuity was transformed into symbolic data using scalable clustering and hierarchical cluster merging processes each of which can be parallelized the raw data is transformed into a symbol sequence with each symbol representing a region of interest in the eye gaze data the identified regions of interest can also be displayed in a space time cube stc that captures both the temporal and contextual information through interactive filtering zooming and geometric transformation the stc representation along with linked views enables interactive data exploration using different sequence analysis methods the symbol sequences are analyzed further to identify temporal patterns in the data set data collected from air traffic control officers from the domain of air traffic control were used as application examples to demonstrate the results

A Manual of the Law of Landlord and Tenant

1871

this 256 page workbook helps fourth grade children learn to follow directions understand test formats use effective strategies to avoid common mistakes and budget their time wisely this workbook includes actual test questions in reading language arts and math tips on test preparation strategies and techniques for answering different kinds of questions full length practice tests and a complete answer key test questions feature up to date content aligned with the common core standards the ready to test series boosts confidence and helps learners improve their test scores by offering children the preparation they need for standardized tests
