excerpt from a practical treatise on surgical diagnosis designed as a manual for practitioners and students i have endeavored to make in most instances selections for contrast of such diseases as are most liable to be confounded and for perspicuity have been forced to frequently duplicate the symptoms of many of them in this volume all questions of

etiology pathology and treatment have been purposely omitted as they have no direct bearing upon diagnosis and therefore do not properly appertain to it each differentiation is in most instances so arranged as to allow the symptoms of each to be reviewed separately by reading from above downwards while by reading across the page the points of contrast become prominent the common symptoms written below each differentiation explain in general the possible causes of error in diagnosis at the close of this volume will be found enumerated under the head of bibliography those authors to whom i am indebted for many statements advanced and from whom occasional extracts have been given i have adopted this method of acknowledgment since the arrangement of disease in a tabulated form precludes the frequent interpolation of authorities confusion would thus often result un less explanatory paragraphs were also inserted and the object of marked contrast in symptoms would be thus thwarted about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from the surgery of the stomach a handbook of diagnosis and treatment in the following pages i have attempted to give a practical account of the diagnosis and treatment of those affections of the stomach which are amenable to direct surgical interference 1 the significance of the information to be gained from test meals is considered in some detail because i believe that such investigations are of great value in the diagnosis of gastric disease it appears to me strange that whereas at the present time bacteriological and pathological examinations are used so extensively in the diagnosis of disease chemical methods are so rarely made use of in practice and dealt with so briefly in text books the stomach tube should be part of the armamentarium of every practitioner it is not essential that he should perform all the quantitative analyses to which i refer but i venture to think that he would be repaid amply if he carried out the ordinary qualitative tests and the estimation of the total acidity of the gastric contents the practitioner be he consultant or otherwise who without the aid which such investigations afford continues to treat a patient suffering from persistent indigestion or gastric pain is acting unfairly to his patient and unjustly to himself about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
