late in the summer of 490 bce a persian invasion force landed on grecian shores at the bay of marathon at the command of king darius i the invaders aimed to punish the athenians for their role against the persian king s forces in the ionian revolt a few years earlier the outnumbered athenians called on nearby sparta for help but their sister city state delayed sending troops because of an ongoing religious festival faced with a decision whether to fight a defensive holding battle while awaiting help from sparta or to attack the invaders right away the athenians elected to attack with the help of some 1 000 warriors from neighboring plataea about 10 000 athenians charged a persian army of at least twice their numbers on the field of marathon by day s end the athenians and their allies had thrust open the doorway to greece s golden age

every urban crisis is also an opportunity and in this penetrating study of post disaster new york and new orleans kevin gotham and miriam greenberg show how and why the market model of redevelopment does so little for the people and places that need it most crisis cities is insightful sophisticated and alas timely it belongs not only in the classroom but on every mayor s desk eric klinenberg author of heat wave

and going solo in this wide ranging and carefully researched book gotham and greenberg explore the crisis driven strategies of urbanization that have been pursued in two major post disaster u s cities and their deeply uneven polarizing and destructive impacts upon the social and ecological fabric a fundamental and original analysis of early twenty first century urban transformations in the age of disaster capitalism this book is a superb demonstration of how the methods of critical urban studies can illuminate the powerful social political economic and ideological forces that are reshaping cities and regions today neil brenner professor of urban theory harvard graduate school of design crisis cities is a critical revelation of the political and economic forces that direct the resources offered to cities after catastrophes the authors clearly show how the resources are not necessarily directed to the rebuilding and recovery projects that serve all segments of the communities and would provide a successful collective future drawing on catastrophes in two well known american cities the dangers of this common path are clearly presented shirley laska professor emerita of sociology university of new orleans

how organizations can use practices developed by expert designers to solve today s open complex dynamic and networked problems when organizations apply old methods of problem solving to new kinds of problems they may accomplish only temporary fixes or some ineffectual tinkering around the edges today s problems are a new breed open complex dynamic and networked and require a radically different response in this book kees dorst describes a new innovation centered approach to problem solving in organizations frame creation it applies design thinking but it goes beyond the borrowed tricks and techniques that usually characterize that term frame creation focuses not on the generation of solutions but on the ability to create new approaches to the problem situation itself the strategies dorst presents are drawn from the unique sophisticated multilayered practices of top designers and from insights that have emerged from fifty years of design research dorst describes the nine steps of the frame creation process and illustrates their application to real world problems with a series of varied case studies he maps innovative solutions that include rethinking a store layout so retail spaces encourage purchasing rather than stealing applying the frame of a music festival to understand late night problems of crime and congestion in a club district and creative ways to attract young employees to a temporary staffing agency dorst provides tools and methods for implementing frame creation offering not so much a how to manual as a do it yourself handbook a guide that will help practitioners develop their own approaches to problem solving and creating innovation
