1990

the assessment of individual differences has generated shockwaves affecting sociology education and a number of other behavioral sciences as well as the fields of management and organizational behavior in covering the assessment of individual differences this book pays tribute to the interests and activities that douglas n jackson has incorporated into his career as a psychologist he continues to be a leader in putting academic findings to practical use he has also inspired generations of students with his mastery of complex concepts and as a personal example of the ability to balance several simultaneous areas of research consistent with the focus of jackson s research the theme of this book will be how the use of deductive construct driven strategies in the assessment of individual differences leads to benefits in terms of the applicability of the assessment instruments and the clarity of the conclusions that can be drawn from the research

Questionnaires psychologiques pour l'activité physique, le sport et l'exercice

2011-04-22T12:14:41-04:00

though decades ago school shootings were rare events today they are becoming normalized active shooter drills have become more commonplace as pressure is placed on schools and law enforcement to prevent the next attack yet others argue the traumatizing effects of such exercises on the students additionally violence between students continues to remain problematic as bullying pervades children s lives both at school and at home leading to negative mental health impacts and in extreme cases suicide establishing safer school policies promoting violence prevention programs building healthier classroom environments and providing better staff training are all vital for protecting students physically and mentally the research anthology on school shootings peer victimization and solutions for building safer educational institutions examines the current sources of violence within educational systems and it offers solutions on how to provide a safer space for both students and educators alike broken into four sections the book examines the causes and impacts that peer victimization has on students and how this can lead to further violence and investigates strategies for detecting the warning signs the book provides solutions that range from policies and programs that can be established to strategies for teaching nonviolence and promoting coexistence in the classroom highlighting a range of topics such as violence prevention school climate and bullying this publication is an ideal reference source for school administrators law enforcement teachers government and state officials school boards academicians researchers and

upper level students who are intent on stopping the persisting and unfortunate problem that is school violence

dsm iv and icd 10 both diagnose personality disorders categorically yet studies indicate that many patients meet criteria for an excessive number of diagnoses raising the question of whether personality disorders are discrete conditions or rather distinctions along dimensions of general personality functioning this collection of papers renews long standing proposals for a dimensional model of personality disorder describing alternative models addressing questions about their clinical application and utility and suggesting that future research seek to integrate such models within a common hierarchical structure with contributions by preeminent researchers in the field dimensional models of personality disorders is drawn from a conference series convened by apa who and nih in order to plan for the fifth edition of the dsm the nomenclature work group concluded that consideration should be given to basing part or all of dsm v on dimensions rather than categories and recommended that a dimensional model for personality disorders should serve as a basis for exploring dimensional approaches in other areas accordingly the volume opens with a presentation of 18 proposals for dimensional models and proceeds with provocative contributions on a number of related issues ranging from hard science to clinical practice among the topics addressed are behavioral and molecular genetic research supporting an etiologically informed dimensional classification of personality disorders the as yet tenuous associations between dimensional trait measures of personality as contained in the models of cloninger depue and siever davis and specific neurobiological measures as examined in neurotransmitter research potential links between childhood and adolescent temperament and personality dimensions and adult personality psychopathology studies examining the covariation of personality dimensions across cultures the continuity of axis i and axis ii disorders and a proposed hierarchical structure of mental disorders that integrates the psychopathology of axis i disorders with specific personality traits the dual challenges of coverage and cutoffs that must be addressed if dimensional models are to be considered viable alternatives to the existing categorical diagnostic system although the editors acknowledge that concerns are certain to be raised regarding conversion to a dimensional classification such as the disruption to clinical practice by a radical shift in diagnosing personality disorder these papers make a strong case for opening the field to alternative ways of enhancing clinical utility and improving the validity of basic classification concepts together they offer stimulating insight into how we approach personality disorders with the hope of encouraging a new model of diagnosis for dsm v
