that anchor and trigger mental distress or well being they also provide insights into how to protect against mental pain and manage it in the best possible way the significance of research early in my therapeutic practice several clients achieved amazing results that psychology could not explain this led to the initiation of an extensive research project the research was met with skepticism as many believed it was impossible to investigate what after 9 years of analyzing mental processes in clients i discovered how mental disorders are mentally constructed and the mental changes clients experience when they improve from treatment one conclusion was that all mental disorders can be cured using words though it may take time these findings represented a solution to challenges that psychology and psychiatry had been trying to solve for over 150 years significant discoveries i found that mental disorders are mentally constructed more simply than previously believed by researchers psychologists and psychiatrists it is possible to investigate mental processes leading to mental distress and the experience of mental distress solely through words mental well being and mental disorders are constructed of the same mental or mental biological material and in the same manner allowing the same methods to be used to treat mental disorders such as anxiety depression and schizophrenia as well as to develop mental well being and skills i now know for sure i am now certain that knowledge of brain psychology and linguistic therapy can lead those with mental distress to take more control over their emotions and mental problems additionally psychologists and health workers can treat clients with greater scientific certainty and predictability achieving faster and better

results the most reliable evidence of this includes success stories from clients comments from international scientific journals and observations from colleagues who have observed my work with students mental distress over many years after 30 years of research and treating more than 1000 clients i am convinced that linguistic brain therapy not only helps individuals but also enables those who have studied the books to help others whether as clients parents leaders trainers or other psychologists for more information visit the website brainpsychology pro simple but not easy the book linguistic brain therapy explains how to treat clients in a way that helps them become mentally stronger feel better about themselves and more effectively take control of their lives the books offer the necessary knowledge the book on the psychology of the brain provides the essential knowledge needed to understand what happens mentally during the development of mental disorders linguistic brain therapy based on brain psychology knowledge guides therapists consultants leaders parents and health workers on how to treat clients and assist both themselves and others for more information you can read my doctoral dissertation on mental distress and mental change available at the university library in oslo are these claims true the books on brain psychology and linguistic brain therapy are the strongest evidence supporting the claims mentioned above practical evidence like success stories from clients and research findings will be shared on my websites in the future brainpsychology pro if you are facing mental challenges whether as a scientist someone experiencing mental distress an athlete as a health worker or in any other role where you feel you are not coping well

services to older people with mental health problems have gone through radical change in recent years legislation has had a profound effect by dictating how care to older people is delivered both within hospital and within the community the recent government agenda emphasizes cost effectiveness value for money and accountability this too is an important driving force in re evaluating the service although not everyone would agree with many of the proposed strategies and there are clearly different views as to the appropriateness of many of the services one thing is certain however the move towards interdisciplinary working is here to stay not all change has been led by legislation and many innovations have been founded in the day to day practices in the care of older people with mental health problems a service of course does not become integrated merely by imposing joint working on a number of professionally based disciplines and in many ways this may not be desirable at its worst it produces duplication where people from different background are all doing the same job this is not the intention of joint working instead it should attempt to improve the quality of service by a rich mix of skills and experience from a number of related disciplines
