with the rise of web 2.0 and social media platforms taking over vast tracts of territory on the internet the media landscape has shifted drastically in the past 20 years transforming previously stable relationships between media creators and consumers the social media reader is the first collection to address the collective transformation with pieces on social media peer production copyright politics and other aspects of contemporary internet culture from all the major thinkers in the field culling a broad range and incorporating different styles of scholarship from foundational pieces and published articles to unpublished pieces journalistic accounts personal narratives from blogs and whitepapers the social media reader promises to be an essential text with contributions from Lawrence Lessig Henry Jenkins Clay

shirky tim o reilly chris anderson yochai benkler danah boyd and fred von loehmann to name a few it covers a wide ranging topical terrain much like the internet itself with particular emphasis on collaboration and sharing the politics of social media and social networking free culture and copyright politics and labour and ownership theorizing new models of collaboration identity commerce copyright ownership and labour these essays outline possibilities for cultural democracy that arise when the formerly passive audience becomes active cultural creators while warning of the dystopian potential of new forms of surveillance and control

Comparative Methods in the Social Sciences

even after teaching generations of social scientists neil smelser s classic study remains the

most definitive statement of methodological issues for comparative scholars in political science anthropology sociology economics and psychology these issues are timeless and therefore the lucid analysis remains timely and relevant offering a unique clarity to working scholars as well as students fighting their way through the methodological thickets of comparative studies smelser posits a methodological continuity between the comparative studies of past masters and the more recent flow of contemporary comparative work to that end he takes a pragmatic critical look at the classic studies of alexis de toqueville Émile durkheim and max weber his analyses respect the historical specifics and contexts of their work but also raise general issues such as cross unit comparability empirical representation of theoretical concepts and measures and historical causality the book further deals with the ongoing flows of comparative study in the social sciences which while methodologically more self conscious than past work nevertheless face a common set of issues including causation classification and reducing bias

this book is one of the most well known and frequently referenced studies of methodology and historical applications in the social sciences and how the approaches vary by disciplines it is written by the internationally recognized expert on the intersection of sociology with economics psychology and political science an enduring resource it is presented now as part of the classics of the social sciences series from quid pro books

causal models are formal theories stating the relationships between precisely defined variables and have become an indispensable tool of the social scientist this collection of

articles is a course book on the causal modeling approach to theory construction and data analysis h m blalock jr summarizes the then current developments in causal model utilization in sociology political science economics and other disciplines this book provides a comprehensive multidisciplinary picture of the work on causal models it seeks to address the problem of measurement in the social sciences and to link theory and research through the development of causal models organized into five sections simple recursive models path analysis simultaneous equations techniques the causal approach to measurement error and other complications this volume contains twenty seven articles eight of which were specially commissioned each section begins with an introduction explaining the concepts to be covered in the section and links them to the larger subject it provides a general overview of the theory and application of causal modeling blalock argues for the development of theoretical models that can be operationalized and provide verifiable predictions many of the discussions of this

subject that occur in other literature are too technical for most social scientists and other scholars who lack a strong background in mathematics this book attempts to integrate a few of the less technical papers written by econometricians such as koopmans wold strotz and fisher with discussions of causal approaches in the social and biological sciences this classic text by blalock is a valuable source of material for those interested in the issue of measurement in the social sciences and the construction of mathematical models

this book is available as open access through the bloomsbury open access programme and is available on bloomsburycollections.com what is the purpose of social science how can social science make itself relevant to the intractable problems facing humanity in the twenty first century the social sciences are under threat from two main sources one is external reflected in a global university crisis that imposes the marketization of higher education on the ancient practice of scholarship the other internal threat is social science's withdrawal from publicly engaged teaching and research into the protective bunker of disciplinarity in articulating a

vision for the public role of social science in the twenty first century john brewer argues that these threats also constitute an opportunity for a new public social science to emerge confident in its public value and fully engaged with the future of humanity in its teaching research and civic responsibilities while also remaining committed to science the argument is presented in the form of an interpretive essay thought provoking forward looking and challenging to intellectual orthodoxy it should be read and debated by all researchers and teachers in the social science disciplines who are concerned by the future of higher education and the relevance of their subjects to the future of humankind

notwithstanding the mythical demise of introspection self observation has always been an

integral aspect of the social sciences in the century following the behavioral revolution psychology has seen a reduction not so much in the frequency as in the rigor with which self observation is practiced a great deal of self observation has been renamed or obscured as for example self report but this has served only to defer and impoverish important theoretical and technical work this volume which contributes to the development of a rigorous theory of self observation is organized around three general objectives to re animate a discourse on self observation through a historical analysis of various self observation traditions to outline and begin to address some of the unique theoretical challenges of self observation and to elaborate some of the technical and practical details necessary for realizing a program of research dedicated to self observation in the first section of the book three historians of psychology trace the evolution of self observation in the second three scholars who are currently working in contemporary traditions of self observation discuss the basic theoretical

and practical challenges involved in conducting self observation research in the final two sections of the book scholars from the phenomenological and narrative traditions trace the history theory and practice of self observation in their respective traditions self observation in the social sciences continues the fine tradition set by transaction s history and theory of psychology series edited by jaan valsiner it is of interest to psychologists and to those who study methodology within the social sciences provided by publisher

this book provides a language and a set of tools for finding bounds on the predictions that social and behavioral scientists can logically make from nonexperimental and experimental data the economist charles manski draws on examples from criminology demography epidemiology social psychology and sociology as well as economics to illustrate this language

and to demonstrate the broad usefulness of the tools there are many traditional ways to present identification problems in econometrics sociology and psychometrics some of these are primarily statistical in nature using concepts such as flat likelihood functions and nondistinct parameter estimates manski s strategy is to divorce identification from purely statistical concepts and to present the logic of identification analysis in ways that are accessible to a wide audience in the social and behavioral sciences in each case problems are motivated by real examples with real policy importance the mathematics is kept to a minimum and the deductions on identifiability are derived giving fresh insights manski begins with the conceptual problem of extrapolating predictions from one population to some new population or to the future he then analyzes in depth the fundamental selection problem that arises whenever a scientist tries to predict the effects of treatments on outcomes he carefully specifies assumptions and develops his nonparametric methods of bounding predictions

manski shows how these tools should be used to investigate common problems such as predicting the effect of family structure on children s outcomes and the effect of policing on crime rates successive chapters deal with topics ranging from the use of experiments to evaluate social programs to the use of case control sampling by epidemiologists studying the association of risk factors and disease to the use of intentions data by demographers seeking to predict future fertility the book closes by examining two central identification problems in the analysis of social interactions the classical simultaneity problem of econometrics and the reflection problem faced in analyses of neighborhood and contextual effects
