Sequence Stratigraphy in Offshore South African Divergent Basins

1995

this volume is the result of an offshore exploration and drilling programme by soekor pty ltd in the republic of south africa beginning in 1987 seismic stratigraphic data and borehole information were incorporated and released in what was one of the first detailed and comprehensive published examples of the new field of sequence stratigraphy the project was conducted over a south african offshore area of 175 000 square kilometres in the pletmos bredasdorp and orange basins which are examples of divergent basins associated with the breakup of gondwana

Double Sequence Spaces and Four-Dimensional Matrices

2022-04-22

double sequence spaces and four dimensional matrices provides readers with a

clear introduction to the spaces of double sequences and series as well as their properties the book then goes beyond this to investigate paranormed double sequence spaces and their algebraic and topological properties triangle matrices and their domains in certain spaces of double sequences dual spaces of double sequence spaces and matrix transformations between double sequence spaces and related topics each chapter contains a conclusion section highlighting the importance of results and pointing out possible new ideas that can be studied further features suitable for students at graduate or post graduate level and researchers investigates different types of summable spaces and computes their duals characterizes several four dimensional matrix classes transforming one summable space into other discusses several algebraic and topological properties of new sequence spaces generated by the domain of triangles

Orbital Forcing and Cyclic Sequences

2009-04-08

classically orbital cycles have been recognized in pelagic and lacustrine sequences characterized by quiet sedimentation not disturbed by tectonics however there is now increasing recognition that orbital cycles do influence climate and

oceanography in general terms there is also increasing acceptance of the possibility at least that the effect should be felt over large parts of the earth's surface and that orbital cycles may well leave signs in other sedimentary environments that are commonly considered to be dominated by tectonics and eustasy containing thirty one papers from a symposium held at the international sedimentological congress in nottingham in 1990 this volume spans a range of topics from the astronomical theory behind orbital forcing to field studies dealing with a broad range of sedimentary environments and to modelling and simulation state of the art research papers international expert authorship the latest research in the highly topical subject of orbital forcing

Proceedings of the Fourth International Congress on Mathematical Education

henry o pollak chairman of the international program committee bell laboratories murray hill new jersey usa the fourth international congress on mathematics education was held in berkeley california usa august 10 16 1980 previous congresses were held in lyons in 1969 exeter in 1972 and karlsruhe in 1976

attendance at berkeley was about 1800 full and 500 associate members from about 90 countries at least half of these come from outside of north america about 450 persons participated in the program either as speakers or as presiders approximately 40 percent of these came from the u s or canada there were four plenary addresses they were delivered by hans freudenthal on major problems of mathematics education hermina sinclair on the relationship between the learning of language and of mathematics seymour papert on the computer as carrier of mathematical culture and hua loo keng on popularising and applying mathematical methods gearge polya was the honorary president of the congress illness prevented his planned attendance but he sent a brief presentation entitled mathematics improves the mind there was a full program of speakers panelists debates miniconferences and meetings of working and study groups in addition 18 major projects from around the world were invited to make presentations and various groups representing special areas of concern had the opportunity to meet and to plan their future activities

Linking Diagenesis to Sequence Stratigraphy

2012-11-05

sequence stratigraphy is a powerful tool for the prediction of depositional porosity and permeability but does not account for the impact of diagenesis on these reservoir parameters therefore integrating diagenesis and sequence stratigraphy can provide a better way of predicting reservoir quality this special publication consists of 19 papers reviews and case studies exploring different aspects of the integration of diagenesis and sequence stratigraphy in carbonate siliciclastic and mixed carbonate siliciclastic successions from various geological settings this book will be of interest to sedimentary petrologists aiming to understand the distribution of diagenesis in siliciclastic and carbonate successions to sequence stratigraphers who can use diagenetic features to recognize and verify interpreted key stratigraphic surfaces and to petroleum geologists who wish to develop more realistic conceptual models for the spatial and temporal distribution of reservoir quality this book is part of the international association of sedimentologists ias special publications the special publications from the ias are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists papers are reviewed and printed to the same high standards as those published in the journal sedimentology and several of these volumes have become standard works of reference

indispensable for students invaluable for researchers this comprehensive treatment of contemporary quasi monte carlo methods digital nets and sequences and discrepancy theory starts from scratch with detailed explanations of the basic concepts and then advances to current methods used in research as deterministic

versions of the monte carlo method quasi monte carlo rules have increased in popularity with many fruitful applications in mathematical practice these rules require nodes with good uniform distribution properties and digital nets and sequences in the sense of niederreiter are known to be excellent candidates besides the classical theory the book contains chapters on reproducing kernel hilbert spaces and weighted integration duality theory for digital nets polynomial lattice rules the newest constructions by niederreiter and xing and many more the authors present an accessible introduction to the subject based mainly on material taught in undergraduate courses with numerous examples exercises and illustrations
