The Air Pilot's Manual: Air navigation 2004 the air conditioning manual assists entry level engineers in the design of air conditioning systems it is also usable in conjunction with fundamental hvac r resource material as a senior or graduate level text for a university course in hvac system design the manual was written to fill the void between theory and practice to bridge the gap between real world design practices and the theoretical calculations and analytical procedures or on the design of components this second edition represents an update and revision of the manual it now features the use of si units throughout updated references and the editing of many illustrations helps engineers quickly come up with a design solution to a required air conditioning system includes issues from comfort to cooling load calculations new sections on green hvac systems deal with hot topic of sustainable buildings

Manual on the Regulation of International Air Transport 2004 introduction cleaning is the first step in preventing aircraft corrosion and wear dirt salt air deposits and other contaminants can promote rapid corrosion and wear of aircraft surfaces and can have an adverse impact on aircraft systems performance effective cleaning requires knowledge of the appropriate materials and methods needed to remove these contaminants section i contains general cleaning information and section ii contains additional procedures for aircraft exposed to volcanic ash or sand desert environments
