Waste and Distributive Justice in Asia

Guidelines for Facility Siting and Layout 2010-08-13 a resource for individuals responsible for siting decisions this guidelines book covers siting and layout of process plants including both new and expanding facilities this book provides comprehensive guidelines in selecting a site recognizing and assessing long term risks and the optimal lay out of equipment facilities needed within a site the information presented is applicable to us and international locations note cd rom dvd and other supplementary materials are not included as part of ebook file

Guidelines for Facility Siting and Layout 2010 a resource for individuals responsible for siting decisions this guidelines book covers siting and layout of process plants including both new and expanding facilities this book provides comprehensive guidelines in selecting a site recognizing and assessing long term risks and the optimal lay out of equipment facilities needed within a site the information presented is applicable to us and international locations note cd rom dvd and other supplementary materials are not included as part of ebook file

Guidelines for Facility Siting and Layout 2003-08-15 this book has been written to address many of the developments since the 1st edition which have improved how companies survey and select new sites evaluate acquisitions or expand their existing facilities this book updates the appendices containing both the recommended separation distances and the checklists to help the teams obtain the information they need when locating the facility within a community when arranging the processes within the facility and when arranging the equipment within the process units

Guidelines for Siting and Layout of Facilities 2018-04-24 the book addresses a growing policy problem confronting all democratic nations by exploring the lessons to be learned from international siting experiences it will prove invaluable reading for academics policymakers government agencies ngos and other societal interests involved in environmental and siting issues book jacket

Managing Conflict in Facility Siting 2005-01-01 annotation examines the social political and environmental issues at stake and the acute conflicts over the siting of industrial facilities and infrastructure essential

reading for all involved in land use planning and facility siting at all levels and in all situations new in the risk society and policy series from dams to landfill sites and power plants to radioactive waste repositories the siting of facilities is a veritable minefield of conflicting data politics perception and controversy for industry planners and authorities and citizens this penetrating new edited collection examines risk power and identity in contests over the siting of infrastructure and industrial facilities going beyond nimby ism experts in a variety of fields bring a multi perspective analysis to case studies from the uk us and europe and expose the political and cultural dimensions of siting conflicts in the process they show how place attachment and notions of landscape and local identity play a prominent role in resistance to development

Guidelines for Siting and Layout of Facilities 2018 oil and gas facilities and coastal areas projections of future domestic oil and gas reserves and production importation of oil and gas ocs oil and gas related facilities secondary effects of ocs development deepwater ports liquified natural gas storage facilities the coastal zone management act of 1972 purpose provisions relevant to energy facility siting national interest and federal consistency provisions status of state management programs amending the coastal zone management act in order to provide extra emphasis on energy facility siting the problem in summary outline of a solution s 586 key provisions pertaining to coastal energy activity ocs leasing and federal consistency management of coastal energy facility siting coastal energy facility impact program coastal energy activity covered eligibility for loans and grants conditions on expenditure net or temporary adverse impacts automatic grants

Facility Siting 2013-06-17 this volume explores the management of conflicts arising from the siting of unwanted projects in the asiapacific a region inadequately explored by the relevant literature the work includes studies on a variety of locations including hong kong japan mainland china taiwan vietnam singapore and others contributions are drawn from several leading scholars intimately familiar with the locations under study and employ theoretical comparative and policybased approaches to analysis of environmental conflict risk management and public participation the editors also provide introductory and concluding sections in which the siting issues under discussion are summarized and contextualized the result is a collection that

serves as an invaluable aid and source of information for policymakers environmentalists and scholars of the asiapacific and elsewhere

The CTARP Energy Facility Siting Study 1979 gives practical advice on how to most effectively locate library facilities based on an analysis of the library s market area comprised of actual and potential users

Energy Facility Siting in Coastal Areas 1975 this book has been written to address many of the developments since the 1st edition which have improved how companies survey and select new sites evaluate acquisitions or expand their existing facilities this book updates the appendices containing both the recommended separation distances and the checklists to help the teams obtain the information they need when locating the facility within a community when arranging the processes within the facility and when arranging the equipment within the process units

Energy Facility Siting in Coastal Areas 1975 siting energy facilities describes a tool for making the process of finding sites for energy facilities more efficient and more responsive to the concerns of society the result should be better sites and a siting process that is understandable and defensible a major focus of the approach is the systematic search for and identification of suitable candidate sites for the proposed facility the evaluation of the candidate sites explicitly includes environmental impacts health and safety socioeconomic effects and public attitudes in addition to engineering and economic criteria the procedure allows the inclusion of the uncertainties and value judgments that are a significant part of all energy siting problems the material in this book can be categorized into three sections problem definition the methodological and procedural aspects of the decision analysis siting approach and illustrations of its use the first two chapters define what is meant by an energy facility siting problem and indicate the approach and motivation for the decision analysis siting procedure subsequent chapters discuss methodological and procedural details of the approach along with a case study on the selection of a site for a pumped storage power plant

National Energy Strategy: Energy facility siting 1992 planning for the management of nuclear wastes whatever their level of radioactivity is one of the most important environmental problems for all societies that

produce utility industrial medical or other radioactive waste products attempts to site low level radioactive waste disposal facilities in western industrial societies however have repeatedly engendered conflicts between governments encountered vehement opposition on the part of local citizen groups and given rise to overt hostilities among involved parties llrw disposal facility siting is the result of a study designed to learn more about the causes underlying failed and successful efforts to site llrw disposal facilities the study is based on case histories of llrw disposal facility siting processes in six countries siting processes in five states within the united states and in five additional countries are analyzed using information obtained from public documents and supplemented by interviews with key participants the selected states and countries are major generators of llrw and each has made efforts to establish llrw disposal facilities during the past decade they vary widely in the approaches they have adopted to llrw management the institutional structures developed for managing the siting process the means used to involve stakeholders and technical experts in the facility siting process and the amount and type of data used in making decisions the analysis of these case histories provides general lessons about the advantages disadvantages strengths and weaknesses of the various approaches that have been attempted or implemented llrw disposal facility siting provides valuable data for academics and researchers working in the area of environmental management

Library Facility Siting and Location Handbook 1997 this volume addresses the management of conflicts that involve the siting of unwanted projects in the asia pacific region contributors are renowned scholars in environmental policy and write from actual experience with the region employing theoretical comparative and policy based approaches to an analysis of environmental conflict risk management and public participation the collection therefore will function as an invaluable resource for policymakers environmentalists and scholars of the asia pacific and elsewhere

Nuclear waste and facility siting policy 1979 this publication deals with modeling of infrastructure risk the objective exploring different methodologies and related applications recognized four major topics complex models simulation models distributional models and deterministic models focus is on the following issues the

state of the art and practice gaps between the arts and practices ways to bridge the gaps and future research directions in the first chapter papers can be found on computational nonlinear models of risk assessment risk based evaluation of safety and security programs in critical infrastructure and risk assessment of modes of terrorist attack one of the papers in the chapter on simulation models is on computational models for the simulation of evacuations following infrastructure failures and terrorist incidents bayesian belief nets for discrete and continuous variables and development of risk based software for analysis of power engineering accidents are two titles of papers in the third chapter of the book on distributional models finally the fourth chapter on deterministic models focuses on environmental risk ranking and more

Facility Siting in the AsiaPacific 2011-07-18 this volume analyzes the politics of hazardous waste siting and explores promising new strategies for siting facilities existing approaches to waste siting facilities have almost entirely failed across all industrialized countries largely because of community or nimby not in my backyard opposition this volume examines a new strategy voluntary choice siting a process requiring mutual decisions negotiated between facility developers and the host communities this bottom up approach preserves democratic rights recognizes the importance of public perceptions and addresses issues of equity in this collection an interdisciplinary group of experts probes recent examples of waste facilities siting in the united states canada germany and japan both the successes and the failures presented offer practical insights into the siting process the book includes an introductory review of the literature on facility siting and the nimby phenomenon as well as instructive essays on the use of voluntary processes in facilities siting this book will be of value to policymakers industry and environmental groups as well as to those working in environmental studies and engineering political science public health geography planning and business economics

Library Facility Siting and Location Handbook 1997-05-28 conflicts over waste disposal facility siting is a pressing issue not only in developed countries but also in fast growing countries that face drastic waste increase and rapid urbanisation how to address distributive justice has been one of the biggest concerns this book examines what determines the influence of distributive justice in siting policy in the 23 wards of tokyo

one idea of distributive justice known as in ward waste disposal iwwd emerged amid the ongoing garbage crisis in the early 1970s iwwd was adopted as a significant principle but its influence waxed and waned over time until the idea was finally abandoned in 2003 to unravel causes and mechanisms behind the changing influence of iwwd this book adopts a framework that considers not only ideational causes but also the power struggles between rationally calculating actors as well as the influence of external events and environments by combining an in depth case study with an integrative theoretical framework this book tells a thought provoking story of the changing influence of iwwd in a deep comprehensive and consistent way this book provides significant insights and lessons for both academics and practitioners
