this book attempts to explain the scientific basis for uht sterilization and aseptic filling as well as describe the processes and equipment used i have tried to avoid producing merely a catalogue of sterilizers and aseptic fillers instead i have attempted to explain the principles on which the different types of plant operate and discuss the factors which influence performance so that information given by manufacturers may be assessed by readers in relation to their own processing requirements statements are generally supported by references where no reference is given personal experience or my interpretation of the work of others is my justification although the book deals mainly with milk and milk products i hope that the information it contains will be useful to those dealing with other products since the principles of processing are in general the same the book is based on more than 30 years involvement with research into uht processing and aseptic filling during this time i have been fortunate to work with and to talk to many people from whom i have learned a great deal i benefited from contacts with dr t r ashton england and professor h hostettler switzerland who were pioneers in the commercial development of uht milk more recently i have been privileged to know and work with research workers in many countries having a common interest in uht processing of these i should mention particularly professors e l thomas v a
