this volume sheds new light on verb constructions by exposing them to cross linguistic analysis based on multilingual corpora it is composed of nine studies which provide insights into various aspects of cross linguistic diversity including showing that seemingly equivalent verb constructions may differ in their semantics and that similar meanings may be expressed by different types of constructions in other words this book shows that different languages have different ways of lexicalising verb based meanings most notably by means of other divergent verb constructions a range of lexicogrammatical aspects of verb constructions are explored throughout the book including time reference modality voice light verb constructions non finite complementation of lexical verbs posture verb constructions semiperiphrastic constructions and the construction and semantic composition of verbs of putting all of the contributions consider english in comparison with at least one of the following languages czech german lithuanian norwegian spanish and swedish as such this volume offers a truly multilingual perspective on verb constructions the diversity of comparisons also highlights the multi faceted nature of the verb phrase which seems to have virtually limitless potential for exploration in the fields of tense aspect modality lexical semantics syntax and phraseology
