The Story of Technology 2019-10-01

a leading technology expert examines ways to manage the rapid proliferation of technology and come to grips with its pervasive influence technology always a key driver of historical change is transforming society as never before and at a far more rapid pace this book takes the reader on a journey into what the author identifies as the central organizing construct for the future of civilization the continued proliferation of technology and he challenges us to consider how to think about technology to ensure that we humans and not the products of our invention remain in control of our destinies in this informative and insightful examination dr daniel m gerstein who brings vast operational research and academic experience to the subject proposes a method for gaining a better understanding of how technology is likely to evolve in the future he identifies the attributes that a future successful technology should seek to emulate and the pitfalls that a technology developer should try to avoid the aim is to bring greater clarity to the impact of technology on individuals and society in particular he considers three technologies now converging that will shape the future biotechnology artificial intelligence and the internet of things he asks will we continue to develop new technologies in these fields merely because basic research shows that we can or should we first consider the likely effects of these technologies on the quality of life at the individual societal and global levels dr gerstein makes a compelling case that rational and informed evolution of our technological options is the best course for ensuring a brighter future

The Future of Technology 2005-08-01

from the industrial revolution to the railway age through the era of electrification the advent of mass production and finally to the information age the same pattern keeps repeating itself an exciting vibrant phase of innovation and financial speculation is followed by a crash after which begins a longer more stately period during which the technology is actually deployed properly this collection of surveys and articles from the economist examines how far technology has come and where it is heading part one looks at topics such as the greying maturing of it the growing importance of security the rise of outsourcing and the challenge of complexity all of which have more to do with implementation than innovation part two looks at the shift from corporate computing towards consumer technology whereby new technologies now appear first in consumer gadgets such as mobile phones topics covered will include the emergence of the mobile phone as the digital swiss army knife the rise of digital cameras which now outsell film based ones the growing size and importance of the games industry and its ever closer links with other more traditional parts of the entertainment industry and the social impact of technologies such as text messaging wi fi and camera phones part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology energy technology and nanotechnology

Technology Matters 2007-08-24

discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters technology matters writes david nye because it is inseparable from being human we have used tools for more than 100 000 years and their central purpose has not always been to provide necessities people excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks perhaps this is because we are intimate with devices and machines from an early age as children we play with technological toys trucks cars stoves telephones model railroads playstations through these machines we imagine ourselves into a creative relationship with the world as adults we retain this technological playfulness with gadgets and appliances blackberries cell phones gps navigation systems in our cars we use technology to shape our world yet we think little about the choices we are making in technology matters nye tackles ten central questions about our relationship to technology integrating a half century of ideas about technology into ten cogent and concise chapters with wide ranging historical examples from many societies he asks can we define technology does technology shape us or do we shape it is technology inevitable or unpredictable why do experts often fail to get it right how do historians understand it are we using modern technology to create cultural uniformity or diversity to create abundance or an ecological crisis to destroy jobs or create new opportunities should the market choose our technologies do advanced technologies make us more

secure or escalate dangers does ubiquitous technology expand our mental horizons or encapsulate us in artifice these large questions may have no final answers yet but we need to wrestle with them to live them so that we may as Rilke puts it live along some distant day into the answers

The Race Between Education and Technology 2008-06-30

this book provides a careful historical analysis of the co evolution of educational attainment and the wage structure in the united states through the twentieth century during the first eight decades of the twentieth century the increase of educated workers was higher than the demand for them this boosted income for most people and lowered inequality however the reverse has been true since about 1980 the authors discuss the complex reasons for this educational slow down and what might be done to ameliorate it

The Dynamics of Technology 2003-12-06

this is a good book for a general reader to understand the inter relationship between science technology and society and particularly the contribution made by engineers towards technology development technovation this volume a collection of 10 essays by leading practitioners from both east and west shows how technology which has become a major force in our lives today is itself like a powerful engine the creation and maintenance of this engine depends on engineers on ideas from science research and development on the pressures and constraints of the market place and national security on the skills and knowledge of manpower and on the financial resources that banks governments and other institutions can command and provide this book does not expound any one point of view rather it tries to understand how the engine of technology works how it is a complex system whose working is shaped by political economic social and cultural forces and in turn shapes them

Science And Technology In A Changing International Order 2019-06-21

as part of its contribution to the 1979 united nations conference on science and technology for development iuncstd the united nations institute for training and research junitar organized an informal research group to assess various aspects of applying science and technology to development through the united nations system this research group was constituted in early 1978 at the initiative of dr robert s jordan former director of research at unitar and was headed by professor volker rittberger a unitar special fellow one of the activities of this group has been the production of a series of working papers on science and technology these papers seek to provide preliminary analyses rather than definitive conclusions their purpose is to facilitate the access of others to the ongoing work of the group and to stimulate critical comments and reactions leading to further improvement of this work

Tip of the Spear 2018-03

tip of the spear our species and technology at a crossroads is an examination of the state of technology and its disruptive influence on the fate of humanity the book argues that the changes before us are existential and that we need to have a new conversation to be sure we are prepared we have for the first time in our species existence jim suggests all of the tools to solve all of the problems facing the world in the next 10 to 15 years or those same tools will end life as we know it it is both a cautionary tale about the inadequacy of our linear systems of organization in the face of exponential technological change as well as a hopeful treatise on how by creating a new definition of innovation based on a new social contract that with as a species we can meet the challenges head on the book is suitable for a broad audience anyone trying to reconcile the complex pressure of the present with the demands of the future the academic leader attempting to bring her students into a new understanding of the world of rapidly changing technology parents trying to help plot a course through the minefield of an always on digital frontier for their teenage kids and the business leader trying to build a new organization infused with purpose and a global narrative at the beginning of the book gibson s three laws of disruption paints a compelling picture of the state of the world in 2018 the slope of the technology change curve is growing steeper the genies of technology invention never go back in the bottle and our systems of organization education democracy capitalism are ill prepared to cope layered on this reality are the hard truths of the fall of human discourse the rise of fake news the weaponization of social media and the reemerging spectre of nationalism the second third of the book walks the reader into the next decade or so through the eyes of two very different young girls olivia is a typical 13 year old from canada mervis is from the developing nation of malawi their stories provide possible scenarios for all of us to contemplate if we don t deal with the challenges of today by changing the narrative into a set of personal stories tip of the spear brings the reader into worlds we can understand and conversations that we have all had it also introduces us to the developing world narrative mervis story provides hints into magnificent possibilities for the developing world one that with the right investments could see our emerging economies by pass the challenges of the past with the promise of future technologies of transportation energy and collaboration the final third delivers a new vocabulary of innovation and change it begins with a new definition of innovation called the innovation of ways contrasted with the traditional innovation of things this new way imagines a new social contract for all of the roles we play in our lives as a parent voter professional leader and teacher in the cautionary and optimistic conclusion jim challenges us to think and act exponentially by creating a new culture of trust and suggest that meeting the tip of the spear head on is possible and urgent

Plato and the Nerd 2018-10-09

how humans and technology evolve together in a creative partnership in this book edward ashford lee makes a bold claim that the creators of digital technology have an unsurpassed medium for creativity technology has advanced to the point where progress seems limited not by physical constraints but the human imagination writing for both literate technologists and numerate humanists lee makes a case for engineering creating technology as a deeply intellectual and fundamentally creative process explaining why digital technology has been so transformative and so liberating lee argues that the real power of technology stems from its partnership with humans lee explores the ways that engineers use models and abstraction to build inventive artificial worlds and to give us things that we never dreamed of for example the ability to carry in our pockets everything humans have ever published but he also attempts to counter the runaway enthusiasm of some technology boosters who claim everything in the physical world is a computation that even such complex phenomena as human cognition are software operating on digital data lee argues that the evidence for this is weak and the likelihood that nature has limited itself to processes that conform to today s notion of digital computation is remote lee goes on to argue that artificial intelligence s goal of reproducing human cognitive functions in computers vastly underestimates the potential of computers in his view technology is coevolving with humans it augments our cognitive and physical capabilities while we nurture develop and propagate the technology itself complementarity is more likely than competition

The Great Knowledge Transcendence 2016-02-01

this book illustrates the unnaturalness of modern science and technology by tracing their cognitive evolutionary and religious origins it elaborates that all premodern knowers faced inherent limits and the west was able to develop modern science and technology because of its inherent contradictions forcing the transcendence of limitations

Leonardo to the Internet 2011-05-16

historian thomas j misa s sweeping history of the relationship between technology and society over the past 500 years reveals how technological innovations have shaped and have been shaped by the cultures in which they arose spanning the preindustrial past the age of scientific political and industrial revolutions as well as the more recent eras of imperialism modernism and global security this compelling work evaluates what misa calls the question of technology misa brings his acclaimed text up to date by examining how today s unsustainable energy systems insecure information networks and vulnerable global shipping have helped foster geopolitical risks and instability a masterful analysis of how technology and culture have influenced each other over five centuries leonardo to the internet frames a history that illuminates modern day problems and prospects faced by our technology dependent world praise for the first edition closely reasoned reflective and written with insight grace and wit misa s book takes us on a personal tour of technology and history seeking to define and analyze paradigmatic techno cultural eras technology and culture follows thomas hughes s model of combining an engaging historical narrative with deeper lessons about technology american scholar his case studies such as that of italian futurism or the localizations of the global mcdonalds provide good starting points for thought and discussion journal of interdisciplinary history this review cannot do justice to the precision and grace with which misa analyzes technologies in their social contexts he convincingly demonstrates the usefulness of his conceptual model history and technology a fascinating informative and well illustrated book choice

The Nature of Technology 2009-08-06

the nature of technology will change the way you think about this fundamental subject forever w brian arthur s many years of thinking and writing about technology have culminated in a unique understanding of his subject here he examines the nature of technology itself what is it and how does it evolve giving rare insights into the evolution of specific technologies and a new framework for thinking about others every sentence points to some further truth and fascination at a time when we are ever more reliant on technological solutions for the world s problems it is extraordinary how little we actually understand the processes that lead to innovation and invention until now this will be a landmark book that will define its subject and inspire people to think about technology in depth for the very first time

How Users Matter 2005-08-12

users have become an integral part of technology studies the essays in this volume look at the creative capacity of users to shape technology in all phases from design to implementation using a variety of theoretical approaches including a feminist focus on users and use in place of the traditional emphasis on men and machines concepts from semiotics and the cultural studies view of consumption as a cultural activity these essays examine what users do with technology and in turn what technology does to users the contributors consider how users consume modify domesticate design reconfigure and resist technological development and how users are defined and transformed by technology the essays in part i show that resistance to and non use of a technology can be a crucial factor in the eventual modification and improvement of that technology examples considered include the introduction of the telephone into rural america and the influence of non users of the internet the essays in part ii look at advocacy groups and the many kinds of users they represent

particularly in the context of health care and clinical testing the essays in part iii examine the role of users in different phases of the design testing and selling of technology included here is an enlightening account of one company s design process for men s and women s shavers which resulted in a ladyshave for users assumed to be technophobes taken together the essays in how users matter show that any understanding of users must take into consideration the multiplicity of roles they play and that the conventional distinction between users and producers is largely artificial

Technological Man: the Myth and the Reality 1969

science fiction films celebrate and critique the impact of a burgeoning technology on the world s cultural political and social milieu the machine age roughly delineated by the two decades between world wars was a watershed period during which modern society entered into an ambiguous embrace with technology that continues today j p telotte carefully blends film technology cultural and genre studies to illuminate this nearly forgotten era in our cinematic history and to show through analysis of classics like the invisible ray metropolis and things to come how technology played a major role as motif actor and producer what he also discovers as he ranges among the american british russian french and german science fiction cinema as well as mainstream films figures and cultural products such as the new york world s fair is a fundamental ambivalence embedded in the films themselves about the very machine age ethos they promoted even as advances in the technical apparatus of filmmaking elevated it from mere entertainment to a medium of general communication and genuine artistic expression machine age science fiction films remained curiously distant from and often skeptical of the very machines on which their narratives focus the resulting tensions telotte writes thus seem to intersect with those implicit in a western world that was struggling with its own transition into the modern rendering the films task inevitably paradoxical and difficult
