a preliminary version o the programming language pascal was dra ted

in 1968 it followed in its spirit the Algol 60 and Algol W line of languages after an extensive development phase a first compiler became operational in 1970 and publication followed a year later see references 1 and 8 p 14 the growing interest in the development of compilers for other computers called for a consolidation of Pascal and two years of experience in the use of the language dictated a few revisions this led in 1973 to the publication of a revised report and a definition of a language representation in terms of the ISO character set this booklet consists of two parts the user manual and the revised report the manual is directed to those who have previously acquired some familiarity with computer programming and who wish to get acquainted with the language Pascal hence the style of the manual is that of a tutorial and many examples are included to demonstrate the various features of Pascal summarising tables and syntax specifications are added as appendices the report is included in this booklet to serve as a concise ultimate reference for both programmers and implementors it defines standard Pascal which constitutes a common base between various implementations of the language

The UNIX System User's Manual

1986

this report describes the ICETHK computer model that is used in conjunction with the HEC-2 backwater model to simulate equilibrium ice jam profiles the ICETHK model fulfills an important need in studies that require the calculation of ice jam affected stage this report presents the theory and limitations of ICETHK and serves as a user's manual and concludes with a discussion of river ice modeling using

icethk

Early Childhood Program Participation Data File User's Manual

1996

this manual is directed to those who have previously acquired some programming skill the intention is to provide a means of learning pascal without outside guidance it is based on the programming language described in the basic definition of pascal and concise reference manual for the experienced pascal programmer the linear structure of a book is by no means ideal for introducing a language whether it be a formal or natural one nevertheless it is recommended to follow the given organization paying particular attention to the example programs and then to reread those sections causing difficulties one may wish however to reference chapter 12 if troubles arise concerning the input and output conventions of the programs the manual was prepared as a file on a computer that is as a sequence of characters of a single type font this is very convenient for the purposes of updating unfortunately it is sometimes a bit awkward to read the reader is asked to be indulgent with the absence of sub and superscripts e.g. m raised to the power n is denoted by m^n

Technical Report and Data File User's Manual for the 1992 National Adult Literacy Survey

2001

martha is a set of general purpose programs for analyzing linear electrical networks available to users with access to a time sharing system the programs analyze as a function of frequency most linear transmission type networks with an input and an output this includes most filters amplifiers microwave networks and feedback systems even if such circuits are relatively complicated with multiple feedback paths and branches the programs cannot handle some complicated interconnections of components and are not set up to analyze nonlinear or time varying networks the topology of the network is described using wiring operators the elements available include lumped and distributed active and passive reciprocal and nonreciprocal elements the possible output includes two port parameters impedance admittance hybrid scattering and ABCD matrices as well as voltage gain insertion gain transducer gain etc these their real or imaginary parts or magnitude or phase may be printed or plotted as functions of frequency or of each other more than one network can be analyzed simultaneously martha is not inherently better at one frequency range than another except perhaps in its repertoire of elements and response functions martha includes besides R, L and C sixteen controlled sources operational amplifiers mutual inductance three transistor models and the possibility of easily creating others ideal transformers several composite pi and tee structures and a few exotic elements such as gyrators for high frequency applications martha has several microwave elements including TEM transmission lines waveguides attenuators and isolators
