future worlds or create space for experts to articulate how the future can be conceptualized and managed with the increased specialization of international law a series of functional regimes and sub regimes has emerged each with their own imageries vocabularies expert knowledge and rules to translate our hopes and fears for the future into action in the present at issue in the development of these regimes are not just competing predictions of the future based on what we know about what has happened in the past and what we know is happening in the present rather these regimes seek to deal with futures about which we know very little or nothing at all futures that are inherently uncertain and even potentially catastrophic futures for which we need to find ways to identify conceptualise manage and regulate risks the existence of which we can possibly only speculate about this book explores how the future is imagined articulated and managed across the various fields of international law including the use of force maritime security international economic and environmental law and human rights it investigates how the future is construed in these various areas how the costs of risk risk regulation risk assessment and risk management are distributed in international law the effect of uncertain futures on the subjects of international law and the way in which international law operates when faced with catastrophic or existential risk this book is a hands on guide for designing and developing computer based materials for education and training the text is written from an control and data fusion for intelligent systems multitasking refers to performance of multiple tasks the most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching in the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations however these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents the present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations the contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training this book is designed to be useful to both the do it yourself layman and the beginning patent attorney it covers step by step every aspect of filing for and obtaining
