physics practical classes form an important part of many scientific and technical courses in higher education in addition to the older standard experiments such

practicals now generally include a few computer controlled experiments developed in association with the research groups active in the particular university or college since there is relatively little exchange of information between the teaching staff of different institutes the personal computer despite its ubiquity is underexploited in this role as a teaching aid the present book provides a detailed description of a number of computer controlled experiments suitable for practical classes both the relevant physics and the computational techniques are presented in a form that enables the readers to construct and or perform the experiment themselves
