The Soils of Israel

2007-09-04

this book describes the soils of israel offering details of their distribution chemical physical and mineralogical characteristics and agricultural attributes the pathways to the formation of each soil type are discussed against the background of such soil forming factors as climate lithology and physiography the distribution of the different soil types is explained based on the relationships between soils and soil forming factors this the first reference on the topic since 1948

divin this insightful and provocative book alon tal provides a detailed account of israeli forests tracing their history from the bible to the present and outlines the effort to transform drylands and degraded soils into prosperous parks rangelands and ecosystems tal s description of israel s trials and errors and his exploration of both the environmental history and the current policy dilemmas surrounding that country s forests will provide valuable lessons in the years to come for other parts of the world seeking to reestablish timberlands div

the environmental history of israel is as intriguing and complex as the nation itself situated on a mere 8 630 square miles bordered by the mediterranean sea and persian gulf varying from desert to forest israel s natural environment presents innumerable challenges to its growing population the country s conflicted past and present diverse religions and multitude of cultural influences powerfully affect the way israelis imagine question and shape their environment zionism from the late nineteenth onward has tempered nearly every aspect of human existence scarcities of usable land and water coupled with border conflicts and regional hostilities have steeled israeli s survival instincts as this volume demonstrates these powerful dialectics continue to undergird environmental policy and practice in israel today between ruin and restoration assembles leading experts in policy history and activism to address israel s continuing environmental transformation

~~from the biblical era to the present and beyond~~
with a particular focus on the past one hundred and fifty years the chapters also reflect passionate public debates over meeting the needs of israel s population and preserving its natural resources the chapters detail the occupations of the ottoman empire and british colonialists in eighteenth and nineteenth century palestine as well as fellaheen and pastoralist bedouin tribes and how they shaped much of the terrain that greeted early zionist settlers following the rise of the zionist movement the rapid influx of immigrants and ensuing population growth put new demands on water supplies pollution controls sanitation animal populations rangelands and biodiversity forestry marine policy and desertification additional chapters view environmental politics nationally and internationally the environmental impact of israel s military and considerations for present and future sustainability

soil classification and terminology are fundamental issues for the clear understanding and communication of the subject however while there are many national soil classification systems these do not directly correlate with each other this leads to confusion and great difficulty in undertaking comparative scientific research that draws on more than one system and in making sense

lausd elementary mathematics student materials grade 4
module 1 v3 (2023)
~~of international scientific papers using a system~~
that is unfamiliar to the reader this book aims to
clarify this position by describing and comparing
different systems and evaluating them in the
context of the world reference base wrb for soil
resources the latter was set up to resolve these
problems by creating an international umbrella
system for soil correlation all soil scientists
should then classify soils using the wrb as well
as their national systems the book is a definitive
and essential reference work for all students
studying soils as part of life earth or
environmental sciences as well as professional
soil scientists published with international union

the papers collected in this book were given and
discussed at the symposium on soil water physics
and technology which was held in rehovot israel
from august 19th september 4th 1971 it was
sponsored by the international society of soil
science i s s s through its commissions i soil
physics and vi soil technology and organized by
the israeli soil science society thanks are due to
the editors for having assembled contributions and
discussion remarks into a well rounded coherent
book the subjects covered in this book are the
theoretical and practical aspects of the following
topics water movement in soils soil water
interactions evaporation from soil and plants

~~water requirements of crops ion activity and~~
migration in soils soilwater management and
salinity in as much as these contributions were
not solicited they represent ideas and subjects
considered important by the authors and debators
in science one often finds a gap between basic
research and practical application if reading this
book creates a feeling of an apparent lack of
balance between theory and practice this
represents the state of our science today and the
thoughtful reader can and will recognize that much

Effluent Irrigation and Agricultural Soils

2009

this publication presents the findings of a survey
carried out in 2005 by a unep team of eight
experts to investigate and assess environmental
risks or pollution in the gaza strip focusing on
the 21 disengaged israeli settlements and the erez
industrial site using satellite imagery and
reports about 100 areas of interest were
identified including industrial buildings waste
disposal sites agricultural plants and storage
tanks overall the report found that the
environmental impact of the former israeli
settlements in the gaza strip was limited with the
main concern being the amount of remaining
asbestos in the rubble of demolished houses once
the rubble is removed asbestos disposed of in a

~~safe manner and the identified areas of~~
contamination are cleaned up there will be no
environmental constraints to human settlement in
these areas

agrochemicals in soils contains selected papers from a joint meeting of the soil chemistry soil fertility and soil clay mineralogy commissions of the international society of soil science in jerusalem israel the book is organized into four parts parts 1 and 2 deal mostly with the chemical reactions of agrochemicals in the soil part 3 explores the movement of agrochemicals in the soil and part 4 elucidates some aspects of agrochemicals and pollution each section begins by one or two invited papers presenting an overview of the topic of the section contributed papers follow reporting the results of experimental studies and theoretical analyses of related specific topics this book will contribute to a better understanding and efficient control of the soil environment

the papers in this volume cover micromorphological studies of a wide variety of topics at various scales from ultramicro to mesoscopic topics included are soil management soil structure surface crusts hardpans and cemented layers soil biota soil genesis hydromorphic soils paleosols archeology and general pedology the range of papers reflects the growing use of soil micromorphology in understanding soil problems in land use and the increasing use of quantitative techniques together with more traditional applications in pedology the book is well illustrated with micrographs and contains both

this is the first of two volumes that together provide a global overview of the impact of agriculture on soil degradation tracing the most critical drivers like the use and abuse of agrochemicals mechanization overgrazing irrigation slash and burn agriculture and the use of plastics this book covers the main effects of agriculture practices on soil degradation in several countries from africa america asia and oceania and it elucidates the impact of chemical agents on soil quality namely the use of fertilizers herbicides pesticides soil acidification and microplastics pollution in these continents a large number of the population depend on agriculture which sets an enormous pressure on the ecosystems divided into 13 chapters the book offers authoritative contributions about the fundamental soil degradation problems in countries such as argentina australia peru and bolivia brazil chile china colombia india israel kenya mexico south africa the united states of america as soil degradation issues are often linked with biodiversity loss and poverty readers will also find in this book an important discussion of the different social economic political and environmental aspects contributing to soil quality and sustainable management given the breadth and depth of its coverage the book offers an

the term soil security is used in the context of maintaining the quality and quantity of soil needed in order to ensure continuous supplies of food and fresh water for our society topics in this unique book on the management of soil sustainability in the mediterranean region include soil information land degradation land desertification pedoenvironments and the carbon cycle and sequestration one main focus of the book is the description of new approaches that have been adapted with regards to interdisciplinary soil ecosystem management to combat and mitigate desertification the contributing authors are renowned experts in their fields which cover the subjects on traditional as well as innovative land use and management
