this book investigates a set of marginal syntactic structures which have been singularly influential in the development of generative theory spotlighting lesser studied languages of the indic family while emphasizing implications for linguistic theory more broadly after first defining what constitutes a marginal syntactic structure this book then undertakes a micro comparative approach to the rigorous exploration of fundamental properties of human language including displacement ellipsis unbounded dependencies and the role of clausal peripheries in such languages as kashmiri and romani in so doing manetta interrogates and ultimately affirms the relevance of marked and marginal strings which have proven to be crucial to generative syntax while simultaneously advocating for the role of lesser studied languages to the study of such properties this book is key reading for graduate students and researchers in linguistics and syntax more specifically as well as those interested in the study of indic languages

technologies enabling computers to process specific languages facilitate economic and political progress of societies where these languages are spoken development of methods and systems for language processing is therefore a worthy goal for national governments as well as for business entities and scientific and educational institutions in every country in the world as work on systems and resources for the lower density languages becomes more widespread an important question is how to leverage the results and experience accumulated by the field of computational linguistics for the major languages in the development of resources and systems for lower density languages this issue has been at the core of the nato advanced studies institute on language technologies for middle and low density languages held in georgia in october 2007 this publication is a collection of publication oriented versions of the lectures presented there and is a useful source of knowledge about many core facets of modern computational linguistic work by the same token it can serve as a reference source for people interested in learning about strategies that are best suited for developing computational linguistic capabilities for lesser studied languages either from scratch or using components developed for other languages the book should also be quite useful in teaching practical system and resource building topics in computational linguistics site de l'éditeur

this volume presents new findings based on the analysis of spoken corpora in thirteen different afro asiatic languages a unique endeavor in the domain of lesser described languages it will be of interest to corpus linguists general linguists typologists and linguists specializing in afro asiatic languages in addition to the rarity of corpus studies based on endangered and lesser described languages the volume is remarkable due to its focus on the role of prosody in interaction with several other phenomena including code switching and borrowing phonology syntax and information structure are explored and the issue of the elaboration of strategies for the typological comparison of corpora is addressed in several papers the volume also contains a presentation of software development conducted within the scope of the corpafras project and based upon the widely used elan the sound indexed and morphosyntactically annotated corpora with their olac metadata and several other deliverables can be accessed and searched at [dx doi org 10 1075 scl 68](https://dx.doi.org/10.1075/scl.68) website

the articles compiled in this volume offer new insights into the wealth of prosodic and syntactic phenomena involved in the encoding of information structure categories they present data from languages which are rarely if ever taken into account in the most prominent approaches in information structure theory and which belong to the afroasiatic amerindian australian caucasian and niger congo language stocks in addition to the significant descriptive value of these pioneering contributions several studies also draw attention to previously undescribed or typologically rare phenomena by adapting a variety of methods to under described and endangered languages ranging from experimental to naturalistic corpus studies this volume also aims to serve as an invitation

it is not the goal of the present volume to promote galago as an animal model but to alert investigators to the potential thereof in this respect this collection of papers serves as a general introduction the subjects covered are purposefully broad so as to illustrate that galago not only has been but may be utilized with success in a variety of research areas most papers deal with the pros and cons of utilizing galago in a specific line of research and in many instances discuss potential problems which may arise the established value of the lesser bushbaby in particular research endeavour is also discussed and illustrated by some contributors

shortlisted for the 2018 tws wildlife publication awards in the edited book category lesser prairie chickens have experienced substantial declines in terms of population and the extent of area that they occupy while they are an elusive species making it difficult at times to monitor them current evidence indicates that they have been persistently decreasing in number since the dust bowl of the 1930s dramatically affected their core range in may of 2014 the united states fish and wildlife service listed lesser prairie chickens as a threatened species granting them federal protection under the endangered species act which included a special rule recognizing significant conservation planning efforts made by state and federal wildlife agencies within the geographical range of the species although the listing was vacated by judicial ruling in september 2015 concern for persistence of the species persists these actions illustrate the uncertain legal status and future conservation challenges for lesser prairie chickens ecology and conservation of lesser prairie chickens provides a compendium of data analytical results and synthesis generated among expert wildlife biologists conservation biologists and ornithologists it thoroughly reviews the life history genetics and ecology of the species and is ultimately directed toward developing and establishing appropriate conservation management strategies it presents a detailed analysis of the issues and risks relative to conservation as well as an overview of potential conservation tools it also addresses the challenges that natural resource managers continue to face in their current conservation efforts while dealing with immediate and short term issues in lesser prairie chicken conservation this book is also a useful starting point for guiding future research management and conservation of the species published in collaboration with and on behalf of the american ornithological society this volume in the highly regarded studies in avian biology series provides a definitive reference for researchers managers and policy makers as well as those with interests in environmental science avian biology game bird management or great plains ecology

the cultural diversity of the asia pacific region is reflected in a multitude of linguistic ecologies of languages of lesser power i e of indigenous and immigrant languages whose speakers lack collective linguistic power especially in education this volume looks at a representative sampling of such communities some receive strong government support while others receive none for some indigenous languages the same government schools that once tried to stamp out indigenous languages are now the vehicles of language revival as the various chapters in this book show some parents strongly support the use of languages other than the national language in education while others are actively against it and perhaps a majority have ambivalent feelings the overall meta theme that emerges from the collection is the need to view the teaching and learning of these languages in relation to the different needs of the speakers within a sociolinguistics of mobility

this book provides insights into the fascinating life of the lesser flamingo phoeniconaias minor and describes how this enigmatic bird has adapted to the extreme conditions of tropical soda lakes and can even withstand the caustic effects of brine however humans are increasingly disrupting the natural cycles of these wetlands and for these pink birds characteristic of these salt lakes it is becoming more and more difficult to find suitable habitats food and breeding grounds their fate is considered a cautionary example of man s dealings with nature will the lesser flamingo survive in a man made world flamingos are considered to be an embodiment of the phoenix and the author interweaves his personal experiences with and observations of the flamingos unusual habitats with the phoenix motif in order to stimulate reflection on the circle of life written in an accessible style that combines science biological information and the author s own travels and fieldwork the book also includes a wealth of captivating images as such it offers a unique resource for biologists and nature loving africa and asia enthusiasts alike

transcription by rna polymerases is a well known process in many organisms mainly at the level of transcription initiation elongation and termination transcriptional process has been well studied in the case of the eukaryotic rna polymerase ii that synthesizes all mrnas and also for the bacterial rna polymerase however many aspects of rna polymerases including their biogenesis function

and even their impact in different cellular processes or in health are still unknown moreover it is interesting to delve deeper into knowledge of less investigated rna polymerases such as those from plants or from cellular organelles to unravel also how these enzymes mediate transcription process and how they impact cellular rna content and gene expression

the first edition appeared fourteen years ago since then there have been significant advances in our science that warrant an updating and revision of sand and sandstone the main framework of the first edition has been retained so that the reader can begin with the mineralogy and textural properties of sands and sandstones progress through their organization and classification and their study as a body of rock to consideration of their origin provenance transportation deposition and lithification and finally to their place in the stratigraphic column and the basin the last decade has seen the rise of facies analysis based on a closer look at the stratigraphic record and the recognition of characteristic bedding sequences that are the signatures of some geologic process such as a prograding shallow water delta or the migration of a point bar on an alluvial floodplain the environment of sand deposition is more closely determined by its place in such depositional systems than by criteria based on textural characteristics the fingerprint approach our revision reflects this change in thinking as in the geological sciences as a whole the concept of plate tectonics has required a rethinking of our older ideas about the origin and accumulation of sediments especially the nature of the sedimentary basins
