python is a high-level, interpreted, interactive, object-oriented programming language that combines features of scripting languages like Perl and Tcl with those of traditional programming languages like C and Fortran. It was created by Guido van Rossum in the late 1980s and is now one of the most popular programming languages in the world. Python is designed to be easy to learn and use, and it has a large and active community of users and developers. It is used for a wide variety of applications, including web development, data science, and artificial intelligence.
