introductory texts on psychological testing and evaluation historically are not in short supply typically however such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests more practical clinically relevant presentations of psychological instruments have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each test understanding psychological assessment is an attempt to address these concerns it brings together into a single volume a broad sampling of the most respected instruments in the psychologist s armamentarium along with promising new tests of cognitive vocational and personality functioning additionally it presents the most updated versions of these tests all in a practical clearly written format that covers the development psychometrics administrative considerations and interpretive hypotheses for each instrument clinical case studies allow the reader to apply the interpretive guidelines to real clinical data thereby

reinforcing basic understanding of the instrument and helping to insure that both the student and practitioner can actually begin to use the test understanding psychological assessment includes cognitive and personality tests for adults children and adolescents as well as chapters on the theory of psychological measurement and integrated report writing

for two decades i have been responding to questions about the nature of health psychology and how it differs from medical psychology behavioral medicine and clinical psychology from the beginning i have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology i have repeatedly used an analogy to newell and simon's general problem solver program of the late 1950s and early 1960s which had two major functional parts in addition to the executive component one was the problem solving core the procedural competence the other was the representation of the problem environment in the analogy the concepts knowledge and techniques of psychology constitute the core competence the health system in all its complexity is the problem environment a health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system quite apparently there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system i hesitate to refer to them as areas of specialization as the man who gave health psychology its formal definition joseph matarazzo has said that there are no specialties in psychology cited in the editors preface to this book
