## **Challenging Life: Existential Questions as a Resource for Education**

2018

there is an increasing recognition today that young people need to have knowledge about religions and world views in order to live and work in diverse societies what kind of maps are they provided with through religious values and ethics education does education address the challenging existential questions that children and adolescents ask about life and the world this volume addresses different aspects of how existential questions have been dealt with in educational research it especially draws attention to the swedish research tradition of focusing on life questions and the interpretation of life in education but with contemporary international research added it also addresses issues of ethics education and discusses possible options for the future of existential questions as a resource for education

## **Academic Writing**

2012

academic writing assists new and established researchers in the process of writing and editing english texts its objectives are threefold to give guidelines for using academic style and language and for writing specific academic genres such as abstracts research proposals and especially research articles to provide a wide range of vocabulary and grammar resources for practice and consultation to teach learners strategies for improving and editing their own writing the book can be used for self study as well as in the context of an academic writing course it can also serve as a reference work to be consulted when writing and editing texts

## **A Resource Guide for Nutrition Management Programs for Older Persons**

1987

this book focuses on the tensions that emerge in teaching the english language arts methods course within teacher education programs the book features chapters that grapple with the historical legacies of influence on methods pedagogy as well as contemporary challenges in teaching methods courses alongside field experiences multiple perspectives from those involved in teaching methods courses within english language arts teacher education programs are presented as a way to dialogue about current and future challenges dialogue is sustained throughout the book as each chapter includes an adjacent response that prompts readers to ask further questions about the chapter s content content with the chapters in the book focus on describing a tension or dilemma that the author faced when teaching the middle secondary ela methods course or adjacent field experience discussion in the chapters responses highlights the importance of the field s history and its present response to the tension featured this book will be a useful resource to teacher educators who wish to investigate new approaches to dilemmas faced in teaching the methods class to pre service teachers

## ***Using Tension as a Resource***

2019-04-16

the availability of many core computing platforms enables a wide variety of technical solutions for systems across the embedded high performance and cloud computing domains however large scale manycore systems are notoriously hard to optimise choices regarding resource allocation alone can account for wide variability in timeliness and energy dissipation up to several orders of magnitude dynamic resource allocation in embedded high performance and cloud computing covers dynamic resource allocation heuristics for manycore systems aiming to provide appropriate guarantees on performance and energy efficiency it addresses different types of systems aiming to harmonise the approaches to dynamic allocation across the complete spectrum between systems with little flexibility and strict real time guarantees all the way to highly dynamic systems with soft performance requirements technical topics presented in the book include load and resource models admission control feedback based allocation and optimisation search based allocation heuristics distributed allocation based on swarm intelligence value based allocation each of the topics is illustrated with examples based on realistic computational platforms such as network on chip manycore processors grids and private cloud environments

## Electronic Resource Management

2012-10-09

industrial production and consumption patterns rely heavily on the intensive use of both renewable and non renewable resources and the consequences for the environment can be serious following a long period of time where the profit incentives of firms have prevailed over preservation of the environment and the world's natural resources a new consensus has emerged concerning the need to regulate firm behaviour aimed at ensuring the sustainability of the economic system in the long run this book offers an exhaustive overview of current economic debate about these topics taking modern oligopoly theory as a benchmark the first part of the book covers static models dealing with incentives for green research and development pigovian taxation cartels environmental quality and international trade as well as the role of corporate social responsibility public firms and consumer environmental awareness as endogenous regulatory instruments then the author moves on to examine the role of time while drawing from optimal control and differential game theory this opens the way to the discussion of fair discount rates to ensure the welfare of future generations as well as the long run sustainability of production and consumption patterns
