Mineral Resources Specialist I 2018 excerpt from a popular guide to minerals with chapters on the bement collection of minerals in the american museum of natural history and the development of mineralogy for use of visitors to public cabinets of minerals and for elementary teaching in mineralogy mineralogy discusses minerals from three points of view first their form which has produced the science of crystallography second their composition and qualities which has produced the science of determinative mineralogy and third their occur rence and appearance which has produced the science of de scriptive mineralogy crystallography is the study of crystals the greater number of minerals in their molecular constitution are controlled by certain geometrical tendencies which bring them into a certain and limited number of forms forms bounded by planes and limited by edges which forms preserve for

each mineral an identity of character and which forms are known as crystals with these crystalline forms are associated certain optical qualities as double refraction dichroism asterism etc which more properly are embraced under determinative mineralogy about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
