the new edition of the well known care and repair of advanced composites 3rd edition improves on the usefulness of this practical guide geared towards the aerospace industry keith b armstrong the original lead author of the first edition was still in charge of this project counting on the expert support of eric chesmar senior composites specialist at united airlines mr chesmar is also an active member of sae international s cacrc commercial aircraft composite repair committee an elite group of industry experts dedicated to the standardization safety security and efficiency of composite repairs in the airline industry mr francois museux airbus and mr william f cole ii also contributed care and repair of advanced composites 3rd edition presents a fully updated approach to the training syllabus recommended for repair design engineers and composite repair mechanics metal bonding has been

included partly because the definition of composite can be interpreted to include metal skinned honeycomb panels and partly because some composite parts have metal fittings or reinforcements that must be treated before bonding this third edition also covers a number of the problems experienced in service some of which may be applicable to metallic sandwich panels offers suggestions for design improvements including repair design as a particular topic and regulatory changes care and repair of advanced composites 3rd edition provides solid technical information and training for a wide range of airline staff

this book is based on lectures held at the faculty of mechanical engineering at the technical university of kaiserslautern the focus is on the central theme of societies overall aircraft requirements to specific material requirements and highlights the most important advantages and challenges of carbon fiber reinforced plastics cfrp compared to conventional materials as it is fundamental to decide on the right material at the right place early on the main activities and milestones of the development and certification process and the systematic of defining clear requirements are discussed the process of material qualification verifying material requirements is explained in detail all state of the art composite manufacturing technologies are described including changes and complemented by examples and their improvement potential for future applications is discussed tangible case studies of high lift and wing structures emphasize the specific advantages and challenges of composite technology finally latest r d results are discussed providing possible future solutions for key challenges such as low cost high performance materials electrical function integration and morphing structures

although the complexity and capability of flight simulators have matched the growth of aerospace technology there has until now been no textbook dealing specifically with the design and construction of flight simulators this is a primary purpose of flight simulation written in collaboration with a number of internationally known specialists the book considers the subject in three sections firstly it introduces the concept of simulation in order to identify the essential elements which make up the modern flight simulator the development of these elements is also traced through the historical evolution of flight simulation the main section of the book commences with an exposition of the mathematical models into dynamic physical devices capable of representing the response of a specific aircraft and its systems the simulation of the flight environment is also covered in relation to cockpit motion systems and methods of representing the external visual scene another important aspect of simulation the design of instructor and operating stations is given separate attention the final section considers the application of flight simulation to research and training and concludes with an appraisal of future prospects and developments
