Quantitative Analysis for Management 1991 how to study the past using data quantitative analysis for historical social science advances historical research in the social sciences by bridging the divide between qualitative and quantitative analysis gregory wawro and ira katznelson argue for an expansion of the standard quantitative methodological toolkit with a set of innovative approaches that better capture nuances missed by more commonly used statistical methods demonstrating how to employ such promising tools wawro and katznelson address the criticisms made by prominent historians and historically oriented social scientists regarding the shortcomings of mainstream quantitative approaches for studying the past traditional statistical methods have been inadequate in addressing temporality periodicity specificity and context features central to good historical analysis to address these shortcomings wawro and katznelson argue for the application of alternative approaches that are particularly well suited to incorporating these features in empirical investigations the authors demonstrate the advantages of these techniques with replications of research that locate structural breaks and uncover temporal evolution they develop new practices for testing claims about path dependence in time series data and they discuss the promise and perils of using historical approaches to enhance causal inference opening a dialogue among traditional
