PUBCO-II, an IBM 704 Code for Computing the Ideal Thermodynamic Functions of a Diatomic Gas Molecule 1960

these proceedings are devoted to a wide variety of both theoretical and experimental areas in particle physics the topics include physics at accelerators and studies of standard model and beyond neutrino and astroparticle physics cosmology cp violation and rare decays hadron physics and new developments in quantum field theory the papers of the volume reveal the present status and new development in the above mentioned items in particular the first results on measurement of lhc pp collision events are also reported

Logarithmic Tables II 1984

about three decades after the first experiments on deep inelastic lepton hadron scattering began to investigate the structure of hadrons the history of this fruitful field of particle physics continues in the broad spectrum of research performed at the electron and positron proton collider HERA at DESY where the multipurpose detectors ZEUS and H1 access ep scattering at a center of mass energy of 300 GeV and explore as yet uncharted kinematic realms of deep inelastic scattering after the first years of data taking at HERA each of the experiments has collected a total of roughly 40 pb⁻¹ of e p data yielding sensitivity to deep inelastic e p interactions at high four momentum transfers Q² where typical cross sections drop into the subpicobarn regime this kinematic domain is characterized by electroweak unification manifesting itself most markedly in the neutral and charged current cross sections which approach an equal order of magnitude as Q² rises above the square of the W and Z masses consequently HERA allows for the first time studies of both types of processes simultaneously with the same initial state conditions and in the same detector and thus we can investigate the interplay of electroweak and strong forces governing the respective cross sections

this book collects the proceedings of the workshop Incontri di Fisica delle Alte Energie IFAE 2006 Pavia 19-21 aprile 2006 the workshop is the fifth edition of a series of workshops on fundamental research in particle physics as carried on at the most important international laboratories and possible fallouts in medical and technological applications researches in this field aim at identifying the most elementary constituents of matter
