Resources in Education 1990 this volume features the proceedings of the eleventh international conference on computer system design and operation in the railway and other transit systems it provides the latest information on the use of computer based techniques and promotes a general awareness of these throughout the business management design manufacture and operation of railways and other advanced passenger freight and transit systems of interest to railway managers consultants railway engineers including signal and control engineers designers of advanced train systems and computer specialists the proceedings will also be of interest to planners of railway network systems manufacturers of the track rolling stock locomotives and other ancillary equipment and systems who all have a common interest in the development and application of computer techniques for the solution of problems in the railway and other mass transit systems papers included in this volume cover the following topics planning safety and security passenger interface systems decision support systems computer techniques driverless operations advanced train control train location dynamic train regulations timetable planning operations quality communications energy management power supply dynamics and wheel rail interface freight condition monitoring asset management maglev and high speed railway

2014-07-22 nanostructured anodic metal oxides synthesis and applications reviews the current status of fabrication strategies that have been successfully developed to generate nanoporous nanotubular and nanofibrous anodic oxides on a range of metals the most recent achievements and innovative strategies for the synthesis of nanoporous aluminum oxide and nanotubular titanium oxide are discussed however a special emphasis is placed on the possibility of fabrication of nanostructured oxide layers with different morphologies on other metals including aluminum titanium tantalum tin zinc zirconium and copper in addition emerging biomedical applications of synthesized materials are discussed in detail during the past decade great progress has been made both in the preparation and characterization of various nanomaterials and their functional applications the anodization of metals has proven to be reliable for the synthesis of nanoporous nanotubular and nanofibrous metal oxides to produce a desired diameter density aspect ratio length to diameter of pores tubes and internal pore tube structure provides an in depth overview of anodization techniques for a range of metals explores the emerging applications of anodic metal oxides explains mechanisms of formation valve metal oxides via anodization

MAX 1988 during the second world war over 250 allied warships from a dozen navies were sent to the bottom by german u boats this ground breaking study provides a detailed analysis of every sinking for which source material survives from both the allied and the german sides resulting in detailed treatment of the fate of 110 vessels with the remainder summarised in an extensive appendix uniquely each entry is built around a specialist translation of the relevant segment of the war diary log of the u boat in question taken directly from the surviving originals remarkably this represents the first large scale publication of the u boat war diaries in any language the book offers a wealth of new information not only with respect to the circumstances of the sinkings from both the allied and german perspectives but also to the technical environment in which they lived as well as the fate of the crews the entries include background details on the vessels concerned and the men involved with a selection of rare and carefully chosen photos from archives and collections around the world each entry is itself a compelling narrative but is backed with a list of sources consulted including documents published works and websites a decade in the making this is probably the most important book on the u boat war to be published for many a year
