Discover how mathematics and science have propelled history from ancient Greece to the Enlightenment and then on to modern times. Shifting the Earth: The Mathematical Quest to Understand the Motion of the Universe takes readers on a journey motivated by the desire to understand the universe and the motion of the heavens. The author presents a thought-provoking depiction of the sociopolitical environment in which some of the most prominent scientists in history lived and then provides a mathematical account of their contributions from Eudoxus to Einstein. This fascinating book describes how, beginning in ancient times, pioneers in the sciences and mathematics have dramatically changed our vision of who we are as well as our place in the universe. Readers will discover how Ptolemy's geocentric model evolved into Kepler's heliocentric model, with Copernicus as the critical intermediary. The author explains how one scientific breakthrough set the stage for the next one and he also places the scientists and their discoveries within the context of history, including Archimedes, Apollonius, and the Punic Wars; Ptolemy and the rise of Christianity; Copernicus and the Renaissance; Kepler and the Counter-Reformation; Newton and the Enlightenment; Einstein and the detonation of the atom bomb. Each chapter presents the work of a single scientist or mathematician, building on the previous chapters to demonstrate the evolutionary process of discovery. Chapters begin with a narrative section and conclude with a mathematical presentation of one of the scientist's original works. Most of these mathematical presentations, including the section on Einstein's special relativity, are accessible using only basic mathematics. However, readers can skip the mathematical sections and still follow the evolution of science and mathematics. *Shifting the Earth* is an excellent book for anyone interested in the history of mathematics and how the quest to understand the motion of the heavens has influenced the broader history of humankind.

william dean howells 1837 1920 autodidact from the farmlands of ohio was a realist novelist literary critic and playwright
nicknamed the dean of american letters in his editor s study column at the atlantic monthly and later at harper s he
formulated and disseminated his theories of realism in literature heroines of fiction is a study of the characters of the female
protagonists in the anglo american novel from defoe to james it is something of an anomaly in howells s canon of literary
texts for reasons of style rhetorical stance and purpose as a critic howells was less concerned with psychological or social
realism than with an ideal of human character and in this collection expands that concern with character within a thesis
asserting that a novel is great or not as its women are important or unimportant these character portraits illustrate howells
impressions of which of these female characters are important and how this status is achieved
